OVERVIEW

Environment America is a federation of state-based, citizen-funded environmental advocacy organizations. Our presence in all 50 states and Washington D.C., hundreds of thousands of members, state-level organizations in 26 state capitals, and hundreds of professional staff, combine independent research, practical ideas and tough-minded advocacy to overcome the opposition of powerful special interests and win real results for the environment. Environment America, the new home of U.S. PIRG's environmental work, draws on 30 years of success in tackling environmental problems.

In 2007, the leaders of our state-based environmental organizations joined forces to form Environment America. Together, in Washington, D.C. and throughout the country we're building on the progress our advocates and activists have made at the state and local levels—from passing laws that promote energy efficiency and solar and wind power, to cutting the pollution that causes global warming, to winning new protections for countless acres of wild places and open spaces. With grassroots support and action across the nation, a team of professional researchers, advocates and issue experts, a spirit of cooperation, a willingness to take on whatever special interests might stand in the way of a clean and healthy environment and an orientation toward real results, Environment America

California Coastline

is providing a powerful new force for progress on the environment in our country.

Environment America and our federation of state environmental groups produce this regular report on key votes in Congress as one of our many tools to help citizens engage in and make an impact on environmental policy. The scorecard is distributed online to our entire membership and through our door-to-door canvass in cities and towns across the country. It is being distributed to more than one million households.

The 2008 scorecard looks at the key environmental votes taken between March 2007 and February 2008. Through our online tools citizens can research votes and basic information on their elected officials as well as look at past reports. For more information visit: www.environmentamerica.org.

Asheville, North Carolina

CONGRESS & THE ENVIRONMENT

Introduction

For more than three decades, Americans have shown overwhelming support for clean air, clean water and protecting open space. More recently, the American people have shown a strong desire to combat global warming and to create a new energy future that is based on increased efficiency and more reliance on clean renewable, homegrown energy sources. Americans came together to advance these goals through a framework of federal laws such as the Clean Air Act, the Clean Water Act and the Endangered Species Act. In addition, and on a regular basis, we come together at the state level to provide critical leadership in setting the standards for how the environment should be protected with local examples that become models for federal action.

All too often, the American public has demonstrated a greater appetite for strong environmental protections than our elected officials have delivered. Powerful interests frequently exert their resources and disproportionate influence to roll back or block key environmental protections. For example, the auto industry successfully blocked increased miles per gallon standards for thirty years until citizen pressure and national security concerns led to a forty percent increase in the standards which was enacted in December 2007.

The 2006 midterm elections provided new leaders in the Congress. While that has resulted in some significant changes, there are unfortunately many storylines in Washington that have not changed. Much of the agenda is still established by a President and administration that has great power over

the policies that protect our environment.

An Assault on the Environment

The assault on the environment from President Bush and his appointees continues unabated. In the past 18 months the administration has been increasingly focused on weakening bedrock environmental protections and the environmental progress of the states.

Susquehanna State Park, Maryland

For example, in February 2008, Environmental Protection Agency (EPA) Administrator Steven Johnson, ignoring a unanimous recommendation of the EPA's professional staff, denied California's request for a waiver under the Clean Air Act to adopt greenhouse gas emission standards for cars. This decision has blocked California and 13 other states that have adopted these standards from requiring automakers to cut global warming pollution from automobiles. California and more than a dozen other states have filed suit against the EPA for failing to heed science and the

law in denying California's request.

The Bush Administration has also attacked bedrock clean water and toxics laws. In June 2007, the Bush administration issued a second policy that eliminates longstanding Clean Water Act protections for many U.S. waterways, putting thousands of miles of streams and millions of acres of wetlands in danger of unlimited pollution and development. The waters at risk from this policy are the source waters for America's rivers, lakes and bays. These waters filter pollution, sustain water supplies, control flood waters and provide habitat for fish and other wildlife.

In December 2006, the Bush administration finalized a rule to rollback the Toxics Release Inventory program, the basic right-to-know program that provides the public with toxic pollution information every year. Under the Bush administration changes, polluters can release ten times more toxic chemicals into the air, water and land before they would be required to report it and can withhold information on the most dangerous toxic chemicals.

Finally, the Bush Administration continues to try to repeal the rule that protects a third of our national forests from logging and road-building. In 2007, the Bush administration filed an appeal to the 9th Circuit Court of Appeals decision that allowed the 2001 Roadless Rule to stand as the law of the land. If successful, the administration's appeal would give industries, such as timber and mining, access to a third of the national forests. The Roadless Rule protects the last wild national forests from most road building associated with industry activities. Millions of Americans took part in the rule-making process for the 2001 Roadless Area Conservation Rule, more than any other federal rule-making in history, with more than 95 percent of them in favor of complete protection for all of these last wild national forests.

A Change in Direction

The new members and leadership of the 110th Congress have changed the direction of environmental policy in measurable ways. The most notable change is in the shift from predominantly defensive votes in the previous Congress to more solution oriented votes in the current Congress. Additionally, there has been a dramatic increase in the number of legislators who have voted 100% of the time for the environment ("Environmental Champions") and fewer who have scored a zero on our

Shiprock, New Mexico

scorecard ("Natural Disasters").

The 110th Congress did make significant progress on energy legislation, and debate on and passage of Energy Security and Independence Act of 2007 is reflected in a number of votes on the scorecard. One of the highlights of the bill, which passed with overwhelming support in both the House and the Senate, is the first time in over thirty years that Congress has increased fuel economy standards. In 2020 the bill will save 1.1 million barrels of oil per day and save consumers more than \$22 billion at the pump.

The House of Representatives also has made more

Environmental Champions vs. Disasters			Defensive vs. Solution Votes		
	2006	2008		2006	2008
House Environmental Champions	71	124	House Defensive Votes	86%	38%
Senate Environmental Champions	6	30	Senate Defensive Votes	57%	30%
House Natural Disasters	114	67	House Solution Votes	14%	62%
Senate Natural Disasters	22	21	Senate Solution Votes	43%	70%
			Total Defensive Votes	71%	36%
			Total Solution Votes	29%	64%

significant progress than the Senate on a number of important proposals such as the passage of investment and production tax credits for energy efficiency and renewable energy paid for through the repeal of tax loopholes for oil and gas companies, and a renewable electricity standard that would require twenty percent of our electricity to be produced by clean and renewable sources of energy. Both of these measures have faced veto threats from the President and have failed to garner the 60 votes necessary for passage in the Senate.

Allegheny National Forest, Pennsylvania

The Outlook from Here

This is a critical time for speeding the transition to the clean energy economy and protecting our natural environment. From clean energy and efficiency tax credits to the Clean Water Restoration Act, Congress has important policy matters to address before it adjourns the 110th session. We will continue our efforts to see that America gets the progress it needs and deserves. As the Bush Administration wraps up what arguably has been the worst ever administration for the environment, we will be watchful against the ongoing efforts of the administrative to undermine key environmental protections and serve the powerful special interests that have maintained unprecedented levels of influence over public policy. Increasingly the public and the states are stepping up to address and speak out for solutions to our environmental problems. Both of the major presidential candidates are on record supporting action on global warming. The transition to a clean energy economy is a major topic in countless Congressional campaigns. Environment America will remain as vigilant as we are optimistic that we can take the steps necessary to preserve and protect the world we live in.

ENVIRONMENTAL CHAMPIONS

Thirty Senators and 124 Representatives took the pro-environment position on every vote that Environment America tracked for the 2008 Scorecard and we consider them *Environmental Champions*.

SENATE VOTE DESCRIPTIONS

1. Energy: Block Funding For Dirty Liquid Coal- Converting coal to a liquid transportation fuel is a dirty process that creates more than twice the greenhouse gas emissions of conventional oil, requires five gallons of water for every gallon of transportation fuel and would increase the environmental impacts caused by coal mining. Liquid coal is also an expensive technology that is not competitive on an open market with traditional gasoline and would require billions of dollars in government subsidies to compete. On June 19th, 2007, the Senate defeated an amendment, S. Amt. 1628, by Senator Jim Bunning (R-KY) to the energy bill, H.R. 6, that would have mandated 6 billion barrels of liquid coal by 2022 by a vote of 39-55. (Roll Call #213). PRO ENVIRONMENT VOTE: NO

In December 2007 the Senate failed to pass legislation that would have established a national renewable energy standard.

2. Global Warming: Evaluate Global Warming Impact Of New Water Projects- Healthy rivers, streams, and wetlands can help protect homes, buildings, and people from sea level rise and more powerful storm surges resulting from global warming. However, the U.S. Army Corps of Engineers, which manages many of the nation's water resources, does not routinely consider the effects of global warming when making decisions about developing water projects. Senators John Kerry (D-MA), Russ Feingold (D-WI), and Susan Collins (R-ME) offered an amendment to the Water Resources Development Act (H.R. 1495) to require the U.S. Army Corps of Engineers to consider the short- and long-term effects of global warming in planning water resource projects. The amendment needed 60 votes to pass. On May 15, 2007, the amendment failed by a vote of 51-42 (Roll call #166). PRO ENVIRONMENT VOTE: YES

3. Energy: Keep Dirty Energy Technologies Out Of The Renewable Energy Standard- America is too dependent on dirty energy sources such as coal and nuclear power. A renewable electricity standard that requires states to increase their use of renewable energy such as wind, solar, biomass and geothermal is a proven policy that will spur investment in renewable technology, create new high paying green jobs and move us down the road towards a clean energy

future. Nuclear power, fossil fuels and other dirty technologies are not renewable and should not be included in a renewable electricity standard. Including these non-renewable technologies undermines the incentive to truly renewable technologies and gives subsidies to some of the dirtiest energy sources, without achieving any environmental benefits. On June 14th, 2007, by a vote of 56-39, the Senate voted to table an amendment by Senator Mitch McConnell for Senator Peter Domenici that would have introduced a watered down renewable electricity standard that included nuclear, fossil fuels and other dirty energy in the definition of renewables. (Roll Call #211). PRO ENVIRONMENT VOTE: YES

4. Oceans: Protect Coasts From Offshore Drilling- Since 1982, Congress has protected America's beaches and sensitive oceans from oil spills and the chronic pollution produced by oil and gas drilling by passing an annual moratorium on expanding drilling to new areas. Sen. John Warner (R-VA) attempted to modify the moratorium by allowing the Governor of Virginia to petition the Secretary of the Interior to allow natural gas exploration at least 50 miles from the coast. On June 14, 2007 the Warner amendment was defeated by a vote of 44 to 43 (Roll Call #212). PRO ENVIRONMENT VOTE: NO

5. Energy: Allow Vote To Create Tax Incentives For Clean Energy- Clean energy from renewable sources like wind, solar, biomass and geothermal is essential

to moving us towards a clean energy future. The government continues to incentivize dirty energy sources like coal, nuclear and oil while giving little incentive to clean energy sources. Tax incentives for renewables like the renewable production tax credit and the production tax credit are crucial drivers of new growth in the industry and essential to promoting a healthy industry. The Energy Advancement and Investment Act of 2007, S.Amdt. 1704, that was introduced by Senator Max Baucus as an amendment to the energy bill, H.R. 6, reduced tax breaks to given to the oil and gas by \$13 billion and extended \$21.8 billion in tax incentives to energy efficiency and renewables. On June 21, 2007, the Senate failed by a vote of 57-36 to file cloture on the Amendment to include the incentives in the energy bill. (Roll Call #223). PRO ENVIRONMENT VOTE: YES

6. Energy: Improve Gas Mileage Standards- Cars and light trucks account for 40 percent of the country's oil consumption and 20% of our greenhouse gas emissions. When fully implemented increasing fuel economy standards for cars and light trucks to 35 mpg by 2020 would save 1.1 million barrels of oil a day in 2020 and saved consumers \$22 billion at the gas pump, and substantially reduce global warming pollution. On June 21, 2007, by a vote of 62-32, the Senate voted to invoke cloture on the Energy bill that contained an increase in fuel economy. (Roll Call #225). PRO ENVIRONMENT VOTE: YES

7. Energy: Improve Gas Mileage Standards (2nd Vote)- Cars and light trucks account for 40 percent of the country's oil consumption and 20% of our greenhouse gas emissions. When fully implemented increasing fuel economy standards for cars and light trucks to 35 mpg by 2020 would save 1.1 million barrels of oil a day in 2020 and saved consumers \$22 billion at the gas pump, and substantially reduce global warming pollution. On June 21, 2007, by a vote of 65-27, the Senate passed an Energy bill that included the first Congressional increase in fuel economy standards in over 30 years. (Roll Call #226). PRO ENVIRONMENT VOTE: YES

8. Energy: Create Renewable Energy And Gas Mileage Standards- A national renewable electricity standard (RES) will substantially reduce global warming pollution while sparking a clean energy boom across the U.S. Extension of renewable energy production tax credits for four years and investment tax credits for 8 years will further help the burgeoning renewables industry. Increasing fuel economy standards for cars and light trucks to 35 mpg by 2020 would save

In June 2007 the Senate passed an Energy bill that included the first Congressional increase in fuel economy standards in over 30 years.

1.1 million barrels of oil a day in 2020, save consumers \$22 billion at the gas pumps, and substantially reduce global warming pollution. The renewable fuels standard mandates the use of biofuels while ensuring that there are safeguards in place to protect the environment and public lands. On December 7, 2007, by a vote of 53-42, the Senate failed to invoke cloture on an energy bill that included an RES, renewable tax incentives and increased fuel economy. (Roll Call #416). PRO ENVIRONMENT VOTE: YES

9. Energy: Extend Clean Energy Tax Incentives And Raise Gas Mileage Standards- Increasing fuel economy standards for cars and light trucks to 35 mpg by 2020 would save 1.1 million barrels of oil a day in 2020, save consumers \$22 billion at the gas pumps, and substantially reduce global warming pollution. The renewable energy production tax credit, the solar investment tax credit, and other clean energy incentives are set to expire at the end of this year. Unless Congress and the President act soon, the bright light of the clean energy industry will likely be extinguished for the short term and potentially cost the U.S. economy an estimated 116,000 jobs according

to the American Wind Energy Association. On December 13, 2007, by a vote of 59-40, the Senate rejected a motion for cloture to proceed to an energy bill that combines renewable tax incentives and increased fuel economy. (Roll Call #425). PRO ENVIRONMENT VOTE: YES

10. Energy: Allow Vote To Extend Clean Energy Tax Incentives For Economic Stimulus- As one of the fastest growing industries in the U.S., the clean energy industry is a shining light in an otherwise lackluster economy. Unfortunately the renewable energy production tax credit and the solar investment tax credit are set to expire at the end of 2008. Unless Congress and the President act soon, the bright light of the clean energy industry will likely be extinguished for the short term and potentially cost the U.S. economy an estimated 116,000 jobs according to the Solar Energy Industries Association. On February 6, 2008, the Senate rejected a motion for cloture on Senator Reid's amendment to the Recovery Rebates and Economic Stimulus for the American People Act of 2008 by a 58-41 vote. The

In June 2007 the Senate turned back an attempt to open up fragile coastline to increased offshore drilling.

clean energy incentives included in Senator Reid's stimulus package would not only stimulate the economy in the short-term by continuing job creation and spurring investment, but also would help solve global warming and promote long-term development and growth in the clean energy technology industry. (Roll Call #8). PRO ENVIRONMENT VOTE: YES

HOUSE VOTE DESCRIPTIONS

1. Energy: End Subsidies For Big Oil And Fund Clean Energy- More than 80% of America's global warming pollution comes from fossil fuels. Despite this, the oil and gas industries still get enormous subsidies from the federal government. With gas prices rising closer and closer to \$4 a gallon, profits for Exxon alone rising to about \$40 billion, and natural gas prices skyrocketing, these industries need no more incentives for exploration or production. The CLEAN Energy Act of 2007 shifts \$18 billion in subsidies from the largest oil and gas companies to the emerging clean energy industries. On January 18, 2007, by a 264-163 vote, the House passed this bill that would start investing in America's vast reserves of renewable energy resources and energy efficiency technologies. (Roll Call #40). PRO ENVIRONMENT VOTE: YES

2. Clean Water: Protect Our Waters From Sewage Overflow- Water quality in the U.S. has significantly improved since Congress passed the Clean Water Act in 1972. EPA has projected that communities across the country will need to spend \$300-\$400 billion over the next 20 years to repair or upgrade sewage treatment systems in order to sustain this progress. The Clean Water State Revolving Fund (SRF) provides necessary federal funding to help communities to make these improvements to their sewer systems. The Water Quality Financing Act of 2007 (H.R. 720) authorizes appropriations of \$14 billion over the next four years for the Clean Water SRF. On March 9, 2007, by a 303-108 vote, the House passed the Water Quality Financing Act (Roll Call #135). PRO ENVIRONMENT VOTE: YES

3. Global Warming: Preserve Funding for Global Warming Research- After the Military Advisory Board, eleven retired three- and four-star admirals and generals representing all four branches of the U.S. Armed Forces, concluded that global warming poses a serious threat to national security, the intelligence authorization bill (H.R. 2082) required the government to produce a National Intelligence Estimate on global warming. Representative Peter Hoekstra (R-MI) offered an amendment to strike this requirement from the bill. On May 11, 2007, the House rejected the amendment by a vote of 185-230 (Roll call #337). PRO ENVIRONMENT VOTE: NO

4. Oceans: Protect Coasts From Offshore Drilling- Since 1982, Congress has protected America's beaches and sensitive oceans from oil spills and the chronic

pollution produced by oil and gas drilling by passing an annual moratorium on expanding drilling to new areas. The moratorium, included in the annual Interior Department appropriation bill, was challenged by Rep. John Peterson (R-PA). The Peterson amendment would have allowed drilling for natural gas as close as 25 miles off all coasts. On June 26, 2007 the House defeated the Peterson amendment by a vote of 233-196 (Roll Call #552). PRO ENVIRONMENT VOTE: NO

In March 2007 the House passed legislation to increase funding to protect our waters from sewage overflow.

5. Oceans: Protect Coasts From Offshore Drilling (2nd Vote)- Since 1982, Congress has protected America's beaches and sensitive oceans from oil spills and the chronic pollution produced by oil and gas drilling by passing an annual moratorium on expanding drilling to new areas. The moratorium, included in the annual Interior Department appropriation bill, was challenged by Rep. Mike Conaway (R-TX). The Conaway amendment would have removed the moratorium on oil and gas drilling off the eastern seaboard from Florida to Delaware starting three miles off our sensitive beaches. On June 26, 2007 the Conaway amendment was defeated by a vote of 264-167 (Roll Call #553). PRO ENVIRONMENT VOTE: NO

6. Global Warming: Maintain Pollution-Reduction Goals- The science is clear that we must quickly reduce global warming emissions from cars, power plants, and other sources in order to protect future generations from the worst effects of global warming. The Interior-Environment appropriations bill (H.R. 2643) included a non-binding Sense of the Congress

resolution, calling for mandatory limits to “slow, stop, and reverse” global warming emissions. Representative Joe Barton (R-TX) offered a motion to strike the resolution from the bill. On June 26, 2007, the House defeated the motion by a vote of 153-274 (Roll call #555). PRO ENVIRONMENT VOTE: NO

7. Preservation: Block Funding for New Roads in Tongass National Forest- As the largest national forest in the country, Alaska’s Tongass National Forest is frequently seen as the crown jewel of the national forest system. In 2001, much of the forest was protected by the Roadless Area Conservation Rule, which protected 58.5 million acres of roadless forests across the country. In a lawsuit, the Bush administration settled with the State of Alaska to remove the Tongass from the Roadless Rule. Still, there is a \$10 billion backlog in repairing and maintaining roads in national forests. To stop taxpayer dollars from being used to

In November 2007 the House voted to protect the Grand Canyon from toxic mining.

build new roads in the Tongass National Forest, Representative Robert Andrews (D-NJ) and Representative Steve Chabot (R-OH) introduced an amendment to the Interior Appropriations bill that would prevent the Forest Service from spending money on building new roads in the Tongass National Forest. On June 26, 2007, by a 283-145 vote, the House voted to pass the amendment (Roll Call #563). PRO ENVIRONMENT VOTE: YES

8. Energy: Create National Renewable Electricity Standard- America is too dependent on dirty energy sources such as coal and nuclear power. Twenty six states have now passed a renewable electricity standard to require an increasing amount of energy from clean renewable energy from the wind, sun, crops and

other sources. A federal renewable electricity standard would spur investment in renewable energy, reduce global warming pollution and help us achieve a new, clean energy future. On August 4, 2007, by a vote of 220-190, the House passed an amendment by Representative Tom Udall (D-NM) to include a federal renewable electricity standard to the energy bill. (Roll Call #827). PRO ENVIRONMENT VOTE: YES

9. Energy: Create Renewable Energy And Energy Efficiency Standards- America is too dependent on dirty energy sources such as coal and nuclear power. A renewable electricity standard that requires states to increase their use of renewable energy such as wind, solar, biomass and geothermal is a proven policy that will spur investment in renewable technology, create new high paying green jobs and move us down the road towards a clean energy future. Energy efficiency is the quickest and cheapest way to make significant

reductions in greenhouse gas emissions and increase our energy security. Aggressive targets for strengthening federal building codes, reforming Department of Energy authority to issue energy efficiency standards for appliance and equipment products, and establishing new efficiency standards for products such as light bulbs, dishwashers, and clothes washers would help us reduce our energy consumption and reduce our global warming emissions. On August 4, 2007, by a vote of 241-172, the House passed an energy bill that combines a renewable electricity standard with efficiency provisions. (Roll Call #832). PRO ENVIRONMENT VOTE: YES

10. Preservation: Protect the Grand Canyon From Toxic Mining- The Grand Canyon faces the growing threat of hardrock mining polluting the national park. The rising price of gold and growing demand for uranium is pushing mining companies to stake claims next to Grand Canyon National Park and other national parks across the West. The current mining law, known as the 1872 Mining Law, leaves the government powerless to stop almost any mine, regardless of the impact to parks, forests, or any public lands. To reform the 136 year old law, Representative Nick Rahall (D-WV) introduced H.R. 2262, The Hardrock Mining and Reclamation Act of 2007 which would protect the Grand Canyon from toxic mining. On November 1, 2007, by a 244-166 vote, the House voted to pass the bill (Roll Call #1033). PRO ENVIRONMENT VOTE: YES

11. Energy: Improve Gas Mileage Standards And Create Renewable Electricity Standard-

America is too dependent on dirty energy sources such as coal and nuclear power. A national renewable electricity standard will substantially reduce global warming pollution while sparking a clean energy boom across the U.S. Extension of renewable energy production tax credits for four years and investment tax credits for 8 years will further help the burgeoning renewables industry. Increasing fuel economy standards for cars and light trucks to 35 mpg by 2020 would save 1.1 million barrels of oil a day in 2020, save consumers \$22 billion at the gas pumps, and substantially reduce global warming pollution. New efficiency standards for products such as light bulbs, dishwashers, and clothes washers help us reduce our energy consumption and reduce our global warming emissions. On December 6, 2007, by a vote of 235-181, the House passed an energy bill that combines a renewable electricity standard, renewable tax incentives, increased fuel economy and efficiency provisions. (Roll Call #1140). PRO ENVIRONMENT VOTE: YES

12. Energy: Defend Green Building Requirements In Federal Grants-

Buildings consume about 40 percent of the total energy used in the United States, and are responsible for about 40 percent of all U.S. carbon dioxide emissions. The initial building design and construction provides the best and most cost-effective opportunity to deploy energy-efficient features that will last for the lifetime of the building and save energy and reduce costs. The HOPE VI Improvement and Reauthorization Act of 2007, H.R. 2534, required federally-funded housing developments and community revitalizations for the low income, frail and elderly to meet residential and commercial buildings criteria for efficiency. On January 17, 2008, by a 169-240 vote, the House defeated an Amendment offered by Representative Shelley Moore Capito (R-WV) that would have weakened these provisions by making them voluntary, deleted the definition of specific green criteria and goals and allowed the Secretary to choose any private industry backed standard for voluntary compliance even if the standard has little public health or environmental benefit. (Roll Call #16). PRO ENVIRONMENT VOTE: NO

13. Energy: Extend Clean Energy Incentives by Cutting Subsidies to Big Oil-

America gets 86% of its

In February 2008 the House passed legislation to extend critical tax incentives to encourage development of America's vast reserves of renewable energy resources and energy efficiency technologies.

energy from dirty fossil fuels. Despite this the oil and gas industries still get enormous subsidies from the federal government. With gas prices rising closer and closer to \$4 a gallon, profits for Exxon alone rising about \$40 billion, and natural gas prices skyrocketing these industries need no more incentives for exploration or production. The Renewable Energy and Energy Conservation act of 2008 shifts some of these subsidies from the largest oil and gas companies to the emerging clean energy industries. On February 27, 2008, by a 236-182 vote, the House passed this bill that extend critical tax incentives to encourage development of America's vast reserves of renewable energy resources and energy efficiency technologies. By harnessing renewable energy sources like wind, solar, and clean biofuels, we can secure our economy and create jobs. By promoting technologies to save energy, we can dramatically reduce our dependence on oil and save consumers money. (Roll Call #84). PRO ENVIRONMENT VOTE: YES
