Executive Summary

Consolidation in the airline industry, pressures created by new security rules, and the recent high cost of aviation gasoline have changed the way we fly. It seems as if every consumer has an airline problem story—how they were trapped on the tarmac, tricked by fees, missed their connection, or lost their bag.

What many consumers don't know is that they have a number of new rights as well as a right to complain, both to the airline and to the government.

For over a decade, the Department of Transportation (DOT) has collected data on consumer complaints about air travel. This report analyzes

these consumer complaints about U.S. air carriers for the five year period from 2009-2013, evaluates the effectiveness of new regulations and compares airlines' performance.

This report tracks trends in tens of thousands of consumer complaints over time, finding how some airlines have improved their rankings and others have worsened. We also compare consumer complaint data with other DOT data that tracks airlines' on-time performance and baggage handling.

The report finds that consumers' greatest numbers of complaints were about Flight Problems, such as delays and cancellations. Other top

Complaints by Category

problems were about baggage, customer service, and issues with reservations, bookings, and boarding. Over time, Flight Problems account for an increasing portion of the total complaints.

The airline that generated the most complaints relative to number of passengers was Spirit Airlines. Each year, Spirit’s passengers were about three times as likely to file a complaint as the second-place airline, and its complaints volume is trending upward over time. Southwest Airlines generated the lowest number of complaints relative to number of passengers each year.

U.S. PIRG Education Fund’s experience with other government agencies and their consumer complaint processes is that greater transparency and public education—including the establishment of a searchable public database of complaints—leads to greater compliance by regulated firms and improved customer service.

Among other recommendations, the report recommends the following:

- That the Department of Transportation (DOT) establish a searchable public database of consumer airline complaints to supplement its monthly summary reports.
- That the DOT move more of its air travel databases onto the machine-readable data.gov platform.
- That policymakers provide funding for the unfunded air passenger consumer complaint hotline established in 2012.
- That the DOT require airlines to report complaint data about frequent flyer programs separately so that it can be added to the data that are available in DOT reports and in the future searchable public consumer complaint database.

Complaints by Airline

Introduction: Airlines Then and Now

In recent years, consumer frustration about airlines has grown. Airlines are merging, leaving passengers with fewer quality options for air travel and crowding air traffic at unavoidable hubs. This report examines air travel complaints filed with the Department of Transportation.

Congress deregulated the airline industry in 1978. That action democratized air travel and opened competition to new entrants but disrupted a system that had been characterized for years by ever-greater reliability. The government approved flight schedules, air fares, conditions and standards of service. The Federal Aviation Administration (FAA) controlled the number of flights at major airports which prevented congestion. Aircraft were placed in service each decade that were faster and more reliable, flight crews were better paid and had arguably higher standards of training and experience. Finally, airport capacity increases and additions in the 1950s through the 1960s kept up with increased air traffic.

For a period, deregulation resulted in lower prices and offered reasonably-priced air travel to new, smaller cities. But since 1978, there has been no net increase in major US airports, so the skies around major cities such as New York and Chicago have become more and more congested. Further, the deregulated airlines have discontinued the use of large jets in favor of more frequent flights with narrow bodied planes and regional jets, often flown by smaller “feeder” partners, carrying 20 to 140 passengers, thereby negating the principal strategy for increasing airport capacity. More recently, regular service to many of those smaller cities has been limited or even discontinued.

Regulations requiring minimum reserve ca-

capacity of equipment and flight crews have been allowed to lapse. Rules that allowed passengers on significantly delayed or canceled flights to use their ticket on another airline’s flight at no additional cost are gone¹, as are regulations requiring other airlines to honor a bankrupt airline’s tickets.

Increases in flight delays of over one hour also grew dramatically following deregulation. This situation not only inconveniences, stresses and results in hardship for airline passengers, but also burdens airlines and the entire economy. The U.S. economy depends upon safe, convenient, relatively low cost air travel, as this is the primary and often only means of long distance transportation.

With the latest wave of consolidation, airfares declined about 50% from 1980 to 2009, but have increased rapidly since 2010 especially when fees and taxes are included.²

In the past decade, the landscape has shifted in U.S. air travel:

Security risks, the price of aviation gasoline and reduced competition due to mergers between major airlines have led to airlines hitting consumers with heavy fees on top of rising fares. Two checked bags, basic meals and snacks, carry-ons, and, often, in-flight entertainment were formerly included in the price of your ticket, but now add-on fees for each of these newly a la carte items can easily add \$100 or more to the cost of a one-way ticket.³ Passengers seeking an aisle or front-of-the-economy-cabin seat, or even just a confirmed seat when booking their ticket, also now pay extra, as do passengers seeking to use entertainment offerings, on most carriers. This

shift has led to limited space for carry-ons and a slowed down boarding process as passengers attempt to avoid bag fees.

Further, while industry consolidation has reduced service to smaller cities,⁴ it has increased traffic at now over-crowded hub airports where those smaller (but much fuller) planes compete for limited gate space and to appear to be “on-time.” The practice of planes leaving gates without leaving the ground greatly increased tensions about flight delays in the last ten years.

The tarmac delay issue reached a critical juncture. Citizens and consumer advocates campaigned against egregious delays by airlines—often with no drinking water provided or inoperable toilets -- which resulted in new limits that took effect in 2009 in 3-Hour Tarmac Delay Rules promulgated by the Department of Transportation (DOT)⁵.

Increased consumer protections came into effect in 2011 through additional DOT rules. Major provisions of the 2009 and 2011 rules were then codified into law with the 2012 Congressional enactment of the Boxer-Snowe Airline Passenger Bill of Rights.⁶

Nonetheless, mergers continue, leaving just four major airlines currently: Delta Airlines, which acquired Northwest Airlines; United Airlines,

which merged with Continental Airlines; Southwest Airlines, which is absorbing AirTran Airways; and US Airways, which is merging with American Airlines. Ticket prices are expected to rise and add-on fees to grow in number and rise. Service to non-hub cities is expected to decline and responsiveness to service quality complaints for economy travelers is expected to worsen.

However, consumers can take advantage of their rights to complain (“How to Complain” information is required to be disclosed on e-ticket confirmations, websites and on request), and also to take advantage of their right to file a grievance with the government and to review statistics on complaints available on the Department of Transportation website, when choosing an airline.

Of course, where the airline flies, ticket prices and schedules will still be the main criteria consumers use, but factoring in information about complaints will help consumers make better choices.

For over a decade, the Department of Transportation has collected consumer complaints about air travel. This report analyzes these consumer complaints about U.S. air carriers for the five year period from 2009-2013, evaluates the effectiveness of new regulations, and compares airlines’ performance.

Five Years of Air Travel Complaints

Filing a complaint—what happens?

Each month, the Department of Transportation’s Office of Aviation Enforcement and Proceedings publishes an Air Travel Consumer Report, which details airline performance statistics and consumer complaint data about the airlines.

Consumers may file complaints with the DOT over the phone, online, or through regular mail. The DOT uses these data to spot trends in the industry and can follow up on potential regulatory violations, although most of the data is only used for statistical purposes.

Total complaints about U.S. carriers

Volume of complaints:

The Department of Transportation receives approximately 10,000 consumer complaints per year against U.S. airlines. Consumer complaints to the DOT have trended upward in volume over the last five years, although the number of complaints declined from 2012 to 2013. Complaints peaked in 2012, when consumers filed 11,447 complaints.

What people complain about:

When consumers file complaints, the DOT records them into the following categories: Flight Problems, Oversales (Over-booking), Reservations/Ticketing/Boarding, Fares, Refunds, Baggage, Customer Service, Disability, Advertising, Discrimination, Animals, or Other.

Over the past five years, the top source of complaints is the ‘Flight Problems’ category, which include “Cancellations, delays, or any other deviations from schedule, whether planned or unplanned.”⁷ Other top complaint categories include Baggage, Customer Service, and Reservations/Ticketing/Boarding.

Over the past five years, most categories have maintained a consistent level of complaints to the DOT.⁸

The one noticeable exception to this trend is Flight Problems. The category accounts for a growing portion of complaints.

The DOT breaks these complaints down by three subcategories—Cancellations, Delays, and Missed Connections, although these subcategories are not broken down by airline. The largest subcategory is Cancellations. Complaints about Missed Connections have remained relatively

Total Complaints about Domestic Carriers (2009-2013)

Complaints by Category

Flight Problems (Subcategories)

Frequent Flyer Miles

constant while complaints about Cancellations and Delays have doubled in the past five years, contributing to the category's overall growth.

Meanwhile, complaints about baggage have dropped as a portion of complaints. New DOT rules increase consumer compensation for lost or delayed baggage.

However, the decline may be because more airlines are imposing fees for checking even a single bag; the fees have also increased in the past few years. In 2008, most airlines began charging passengers to check their first two bags.⁹ As of 2013, Southwest Airlines is the only remaining major carrier that allows passengers to check two bags for free, while JetBlue is the only other major carrier that allows passengers to check the first bag for free.¹⁰ Facing higher fees, passengers attempt to avoid checking bags altogether, meaning fewer bags are lost or mishandled.¹¹

The DOT also includes complaints about frequent flyer programs within the 'Other' category, although these complaints are not broken down by airline.

Comparing Complaints to On-Time Performance

When the overall volume of complaints spiked in 2012, Flight Problems actually dropped as a portion of complaints, while the Reservations/Ticketing/Boarding category spiked and Customer Service complaints rose as a portion of complaints.

The Bureau of Transportation Statistics (BTS) tracks on-time performance for the entire domestic system, and mishandled baggage reports for all airlines with over 1% market share by revenue-miles.

On-time arrivals peaked in 2012 and then dropped in 2013. Correspondingly, complaints about Flight Problems dipped as a proportion of overall complaints before rising again in 2013.

While on-time performance increased overall from 2009 to 2013, complaints about Flight Problems were the fastest-growing category, accounting for an increasing proportion of complaints to the DOT.

Mishandled baggage reports filed with the airlines that must report to the DOT have been dropping since 2009, except for an increase in 2013. This lines up exactly with consumer complaints, which were declining steadily as a proportion of all complaints until 2013, when they increased.

In February 2011, after pressure from consumer advocates including Flyersrights.org and U.S. PIRG, Transportation Secretary Ray LaHood announced new and stronger protections for airline passengers.¹² These included more protections, such as greater compensation for consumers whose bags are lost by the airline.¹³ Complaints had declined with passengers checking fewer bags, and they continued to decline in 2011 and 2012, before increasing in 2013.

On-Time Performance (All airlines)

Mishandled Baggage Reports

Which Airlines Consumers Complain About

Consumers can file complaints about U.S. airlines, foreign airlines, travel agents, tour operators, and ‘other.’ For this report, we researched only complaints about domestic airlines, for which the DOT tracks on-time performance and enplanement data. Most complaints (approximately three-quarters) are about U.S. airlines. In this section, we focus on domestic airlines with over 10,000,000 enplanements (passengers) in 2013 for airlines with data available for the full five years back to 2009.¹⁴

We normalized complaints by calculating the number of complaints per 100,000 passengers (‘systemwide enplanements’) on the airline each year.¹⁵

Spirit Airlines, which markets itself as a low-cost, no-frills airline, generated the most complaints per 100,000 passengers every single year in the study, by a large margin. It was nearly three times as likely to generate complaints as the second-place airline each year. As the airline has grown in the past several years, complaints against the airline have skyrocketed.

Complaints by Airline

Complaints by Airline (excluding Spirit)

Since 2008, the DOT has hit Spirit with five different fines totaling \$565,000 for violating various consumer protection laws concerning oversales, baggage, and multiple cases of deceptive advertising.¹⁶

If Spirit Airlines is removed from the graph, trends in the other airlines' performances become clearer.

Observations:

United Airlines, which completed its acquisition of Continental Airlines in 2012, saw a rising number of complaints in the time period, spiking in 2012. While the number of complaints per 100,000 passengers dropped in 2013, it is still one of the most complained-about airlines. In the final year it operated independently (2011), Continental generated 1.82 complaints per 100,000 passengers, placing it near the top of the rankings but still below United.

Delta Airlines, meanwhile, had the greatest number of complaints per 100,000 passengers in

2009 and 2010, excluding Spirit Airlines. Since it completed its merger with Northwest Airlines in 2010, the number of complaints it generated per 100,000 passengers has dropped every year. In the final year it operated independently (2009), Northwest generated 1.27 complaints per 100,000 passengers, placing it in the middle of the rankings and below Delta.

American Airlines has generated increasingly more complaints per 100,000 passengers every year since 2009. It was once in the middle of the pack and is now one of the most complained-about airlines.

American Eagle Airlines is a regional feeder airline owned by American Airlines, but American allows its brand to also be used by several other airlines. Complaints about American Eagle have increased steadily since 2009.

Southwest Airlines is consistently the least complained-about airline among airlines with over 10,000 passengers. While it saw its own highest number of complaints per 100,000 passengers in

2013, it is still the least complained-about airline in this set.

AirTran Airways, which was purchased by Southwest in 2010, was generating fewer and fewer complaints per 100,000 passengers until 2013, when it saw a jump, as did its parent company, Southwest Airlines.

Frontier Airlines has grown considerably in the last several years, and its complaint volume has grown as well. Frontier saw a large jump in 2013, becoming the most complained-about airline in the group besides Spirit Airlines.

After peaking in 2010, *JetBlue Airways* has dropped in complaints per 100,000 passengers for three straight years.

US Airways has remained in the worst several airlines by complaint ratio for several years, although it has seen improvement in the past two years and dropped out of the worst five for the first time in 2013.

Alaska Airlines remained one of the least complained-about airlines through 2009-2013, generating only about 0.5 complaints per 100,000 pas-

sengers each year.

Pinnacle Airlines was renamed Endeavor Air in 2013, and is owned by Delta Airlines.¹⁷ Its complaint volume was steadily increasing until 2013, when the volume improved slightly.

Comparing complaints about companies with their record in regards to flight problems.

Overall, complaints about flight problems have grown as a percentage of overall complaints to the DOT about airlines. At the same time, the percentage of flights arriving on time has increased overall since 2009, although on time performance dipped in 2013.

Among individual airlines, there are similar trends. Alaska Airlines, which is consistently one of the most on-time airlines, is also consistently one of the least likely airlines to generate complaints about Flight Problems.

While most airlines saw a decrease in on-time arrivals in 2013, United Airlines actually saw an increase. Correspondingly, most airlines saw an

Flight Problem Complaints by Airline

Airline On-Time Performance

Flight Delays Under Airline Control

increase in complaints about Flight Problems, but United saw a major decrease.

However, even though passengers on Southwest were least likely to file complaints with the DOT, Southwest Airlines is far from the most on-time airline, ranking 8th of 11 in 2013.

Flights are delayed for a number of reasons. For airlines with over 1% market share, the DOT tracks on-time performance and reasons for delay. A number of flights are delayed due to weather that is too dangerous to fly in. This is more likely on the East Coast, where summer storms and winter blizzards are more likely to disrupt flights. Some flights can be delayed due to long security lines at an airport, delays in the national aviation system, and aircraft arriving late.

A number of flights are delayed by what the DOT refers to as “Air Carrier Delay,” or “circumstances within the airline’s control” such as maintenance or crew problems.

Many of the airlines move together on this graph. Most airlines, except Frontier and United, improved performance in 2011, with fewer delays

within the airlines’ control. Since 2011, most of these airlines have reversed these gains. Southwest spiked in 2013 with nearly 13% of all flights delayed due to the air carrier, even though Southwest generated the lowest number of complaints per passenger.

Other airlines that were most likely to have flights delayed due to factors within their control include JetBlue and Frontier, two airlines with consistently low on-time performance overall. United saw increases several years in a row and more than doubled flights delayed for these reasons from 2009-2013. AirTran was ranked well for several years but more than doubled their rate in 2013.

Only Alaska Airlines never had more than 5% of flights delayed to due factors within their control.

Comparing Airline Complaints about Baggage

Unlike total complaints by airline, baggage complaints by airline plunge in 2012. United was the only exception, but in 2013 its baggage complaints dropped somewhat while all other airlines saw a

Baggage complaints by airline

Mishandled Baggage Reports by Airline

spike, especially Frontier and American. Southwest and Alaska Airlines consistently had the fewest number of complaints per 100,000 passengers.

The DOT tracks mishandled baggage reports for all airlines with over 1% market share by revenue-miles. These are reports filed with the airlines rather than complaints filed with the DOT. The airlines then report this data to the DOT to include in the monthly Air Travel Consumer Reports.

Overall, reports of mishandled baggage have been declining. However, several airlines saw increases in 2013, just as complaints increased. The

biggest increases were for AirTran and its parent company, Southwest.

JetBlue, which does not charge for the first checked bag, and Frontier were consistently some of the least likely airlines to mishandle baggage. AirTran was the least likely overall until 2013, when reports of mishandled baggage doubled.

The decline may be because more airlines are imposing fees for checking even a single bag and fewer passengers are checking their bags, or because new DOT rules increase consumer compensation for lost or delayed baggage.

Conclusions and Recommendations

The Department of Transportation's Air Travel Consumer Reports reveal important information about consumer frustrations with air travel.

- In many cases, the volume of consumer complaints corresponds with airlines' performance. Complaints about Flight Problems correspond to airlines' percentage of on-time arrivals and complaints about Baggage correspond with airlines' mishandled baggage reports. Consumers are responding to airlines' mistakes.
- Performance varies by airline, as do complaints. For some airlines, such as Alaska Airlines and Delta Airlines, good or improving service in on-time arrivals and baggage handling corresponds with lower complaint numbers. For other airlines, such as United Airlines, poor or worsening performance corresponds with high complaint numbers.
- Unlike several other government consumer complaint databases maintained at saferproducts.gov, safercar.gov and cfpb.gov, which can be downloaded and searched by individual complaint or category, the DOT's Office of Aviation Enforcement and Proceedings of the Aviation Consumer Protection Division publishes only a monthly pdf summary of complaint statistics, not a searchable complaint database. The pdf reports include information on air travel problems including on-time arrivals, lost luggage disputes and involuntary bumping.
- Database files of raw aggregate data on total numbers of complaints and types by airline are downloadable from the DOT's Bureau of Transportation Statistics and serve as the source of data for this report.
- U.S. PIRG Education Fund has on several occasions urged the DOT to establish a search-

able consumer complaint database and make complaint data more user-friendly to consumers and researchers.

Recommendations to the DOT

- That the Department of Transportation (DOT) establish a searchable public database of consumer airline complaints to supplement its monthly summary reports.
- That the DOT move more of its air travel databases onto the data.gov platform, using machine-readable formats (such as xml or rdf).
- That the DOT require airlines to report complaint data about frequent flyer programs separately so that it can be added to the data that are available in DOT reports and in the future searchable public consumer complaint database.¹⁸ In addition, the DOT should include airline-by-airline complaint data about frequent flyer programs as a discrete category.
- That the DOT provide airline-by-airline complaint data for all subcategories of Flight Problems (Cancellations, Delays, and Missed Connections).

Recommendations to Policymakers:

- Policymakers should consider providing funding for the unfunded air passenger consumer complaint hotline established in 2012.
- Policymakers should consider additional funding to the DOT for evaluation and adjudication of consumer complaints.

Recommendations to Airlines:

- Airlines should pay close attention to complaint data that the DOT publishes and work to correct major lapses.

Methodology

Air Travel Consumer Reports: The Department of Transportation publishes reports that detail complaint data for U.S. and foreign airlines on a monthly basis through the Office of Aviation Enforcement and Proceedings. Reports published in February include total complaint information for the calendar year prior (January-December). These reports also include data for on-time performance and mishandled baggage for airlines with over 1% market share in revenue-miles.

Enplanement data: The Department of Transportation's Bureau of Transportation Statis-

tics publishes charts that list how many passengers travel on each airline each year, or enplanements. For determining the number of enplanements, we used the T-100 Market (U.S. Carriers Only) chart available at <http://www.transtats.bts.gov>.

Because T-100 charts are not available through December 2013, for 2013 enplanement numbers we used data listed in the complaints section of the February 2014 Air Travel Consumer Report for all airlines with over 1% market share by revenue-miles. For Spirit Airlines, we estimated annual enplanements using the BTS tool at <http://www.transtats.bts.gov/carriers.asp>.
