Clean water blocked across the country

Court suspends protections we helped win

For more than a decade, loopholes in the Clean Water Act left streams that flow into many of the waterways we love and rely on in Maine and across the country vulnerable to pollution.

More than 800,000 of you took action with Environment Maine to close these loopholes in the Clean Water Act—and President Obama's Clean Water Rule, released in August, did just that, restoring protections to 2 million miles of streams and the drinking water sources for 1 in 3 Americans.

But now, the historic clean water protections that you helped win have been suspended nationwide, and could be overturned, due to lawsuits brought by polluters, with the support of more than 20 attorneys general across the country.

Polluters attack rule in court

Within hours of the Clean Water Rule's September release, the Environmental Protection Agency (EPA) was hit with a flood of lawsuits from giant corporate polluters, who were joined, within weeks, by state attorney generals. In October, a U.S. Appeals Court suspended the rule nationwide, and may vote to overturn it.

"For more than a decade, the courts left thousands of our streams and wetlands in a precarious legal limbo, vulnerable to pollution and development," said John Rumpler, senior attorney for Environment Maine. "Now they've done it again."

Your support helps us respond

We can't allow our country to go backwards on clean water. So in 2016, we're

▲ Clean water supporters turned out to a kayaking event to raise awareness about the threats facing our favorite waterways.

doubling down on our efforts to protect this critical rule.

With you behind us, Environment Maine will urge attorneys general to intervene on the right side of the litigation. We're also organizing legal scholars to speak up about the legal soundness of the Clean Water Rule. At the same time, we're keeping the

pressure on our leaders in Congress to beat back polluters' attempts to pass legislation weakening the rule.

Most importantly, you're helping us keep the debate focused on what this issue is really about: clean water for our families.

You make the difference

As a member of Environment Maine, you're helping us win tangible results for our environment. We all want the next generation to be able to enjoy the same great parks we treasure, clean air and water, and a safer world free from the threats of global warming.

That's why in the face of discouraging setbacks in Washington, or opposition from powerful special interests, I'm counting on members like you, who share these values, to stand with us as we work for a greener future.

The advances we make for our environment are shaped by people like you who translate their hope for a better future into action and advocacy. So, even though at times the road feels riddled with obstacles, I feel hopeful. Together, we're making strides on global warming, clean water and protecting the places we love by building people power and amplifying the call on our elected officials to be champions for our environment.

Thanks for standing with us.

Recent action

We won! President Obama rejects Keystone XL

Your support won a monumental victory this November when President Obama rejected the construction of the Keystone XL pipeline—a pipeline designed to transport tar sands from Canada across the United States. Together, Environment Maine and our members fought alongside our allies for years against this project, which State Department officials estimated would produce 26 million metric tons of carbon pollution each year—the equivalent of 5.7 million cars.

"The Keystone XL pipeline would slam the accelerator on global warming, so we're thrilled that President Obama is applying the brakes," said Anna Aurilio, director of our Global Warming Solutions program. "The victory belongs to all the Americans who have been fighting for years for their water, their communities, and their kids' future, and it's a crucial step toward the 100 percent clean energy future the climate crisis demands."

Mainers lobby for climate action in Washington, D.C.

This fall, Environment Maine members and supporters headed to Washington, D.C. to meet with our leaders in Congress about the impacts of global warming on Maine, and the importance of the Clean Power Plan—the single largest step our country has taken to tackle global warming pollution.

Our delegation, comprised of Mainers of all ages, shared their own personal experiences from perspectives of faith, public health, agriculture, sporting and our energy economy. Global warming is already affecting Maine, with milder winters, more powerful storms and rising sea levels.

We've been How we're defending the Clean Power Plan, with more than 50,000 Mainers taking action with us. This winter, we're urging Sens. Susan Collins and Angus King, and Reps. Chellie Pingree and Bruce Poliquin to do all they can to ensure the success of the Clean Power Plan.

▲ Environment Maine staff and supporters of all ages traveled to Washington, D.C., to lobby for action on global warming.

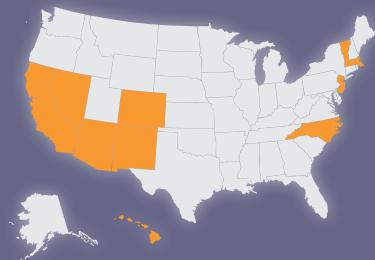

Solar's shining success in 2014

Solar power offset 27.5 million metric tons of carbon dioxide pollution—the equivalent to the annual pollution from 6 million vehicles.

One third of the United States' new installed electric capacity came from solar power.

Just 10 states accounted for 86 percent of U.S. solar electricity capacity.

Maine ranked #24 in the nation for electricity capacity from solar.*

Who's standing in the way of you going solar?

Credit: Elena Elisseeva/Shutterstock

Solar energy is booming across the country. In just the last three years, America's solar photovoltaic capacity tripled, largely driven by just 10 states, according to recent research by Environment Maine Research & Policy Center.

Yet, as solar grows and generates increasing amounts of clean energy at increasingly affordable prices, electric utilities, fossil fuel interests and powerful industry front groups have begun chipping away at the key policies that have put solar energy on the map in the United States—often in the face of strong objections from a supportive public.

Leading states have strong policies

Environment Maine Research & Policy Center's annual report "Lighting the Way," released for the third time in September, found that solar's recent and growing success is due not to the nation's solar potential but rather to policies that have allowed increasing numbers of homeowners, businesses, communities and utilities to "go solar."

Of the top 10 states in the report for solar capacity per capita—Hawaii, Arizona, Nevada, California, New Jersey, New Mexico, Vermont, Massachusetts, North Carolina and Colorado—all have renewable energy requirements and nine have laws that allow solar customers to connect to the electrical grid, or earn credit for excess electricity sent back to the grid. These 10 states are responsible for 86 percent of today's solar electricity capacity.

Special interests stand in the way

The continued success of solar power, however, has been threatened by recent attacks on key solar policies. Environment Maine Research & Policy Center's report, "Blocking the Sun," released in October, documented 12 fossil-fuel-backed groups and electric utilities that are running some of the most aggressive campaigns to slow the growth of solar energy in the United States.

These campaigns are often waged in the dark, with industry-funded think tanks providing model legislation and political cover that allow in-state electric utilities to attack key solar energy policies.

In mid-2015, at least 21 states had either ongoing or recently resolved proceedings around policies to slow the growth of solar energy.

"By wide margins, Americans support pro-solar policies," said Bret Fanshaw, Environment Maine Research & Policy Center solar program coordinator. "That's why fossil fuel interests and their front groups have resorted to shady and deceptive tactics to undermine them. Ultimately, it's up to state leaders to reject these attacks and support a clean energy future."

Our research recommends that state decision-makers resist utility and fossil fuel industry influence by rejecting policies that place restrictions or tariffs on solar or rollback renewable electricity standards. In addition, state leaders can do more to encourage solar energy's growth by embracing ambitious goals for solar energy and adopting policies that will help meet them.

Environment Maine

Our mission

We all want clean air, clean water and open spaces. But it takes independent research, and tough-minded advocacy to win concrete results for our environment, especially when powerful interests stand in the way of environmental progress.

That's the idea behind Environment Maine, Inc., a project of Environment America, Inc. We focus on protecting Maine's air, water and open spaces. We speak out and take action at the local, state and national levels to improve the quality of our environment and our lives.

How you can help save the bees

Millions of bees are dying off with alarming consequences for our environment and our food supply. We rely on bees to pollinate major crops, from almonds to strawberries to the alfalfa used to feed dairy cows. No bees means no food.

This fall, you helped Environment Maine launch our grassroots efforts to protect our pollinators from this threat, making it possible for us to canvass on the street and go door-to-door to educate people about what's at stake. Scientists point to several causes behind the die-off, including a class of pesticides known as neonicotinoids, which are toxic to bees. We need your continued help to convince the Environmental Protection Agency to declare a moratorium on bee-killing pesticides.

Please go to www.EnvironmentMaine.org to learn more about how you can keep up the fight with us in 2016.
