Develop and publicize local financing options

FINANCING OPTIONS EXPAND ACCESS

Not everyone interested in going solar can pay for a new solar installation up-front. Statewide and citywide financing programs can make solar energy available to households, nonprofits and small businesses that might otherwise be priced out of the market. Solar financing options can include loans and installment programs, as well as leasing options that reduce up-front investment. Offering these options for your community can:

- Decrease up-front costs so that more community members can access solar energy
- Allow you to reach your solar goals faster by involving a broader portion of your community
- Create opportunities to partner with local financial institutions and solar installers to support the local economy

PROGRAMS TO CONSIDER

Several different categories of financing options can enable cities to expand solar access. Some of the most popular and beneficial include:

- **The Property Assessed Clean Energy (PACE) Program:** This program allows local and state governments to loan money to home and business owners for energy and efficiency improvements, often through a third-party administrator. This program includes an option to tie a

loan for a solar installation to the property itself so that it is transferred to the new owner if the property is sold. Cities can adopt PACE legislation and issue PACE bonds, which the property owner then pays back on top of their property tax bills. This allows property owners to see energy savings as they pay off a solar project, usually resulting in net savings for the customer.

- **Public-Private Partnerships:** Cities can also partner with local financial institutions to offer low-interest loans for solar projects. The [“Milwaukee Shines”](#) program, for example, partnered with Wisconsin’s Summit Credit Union to offer competitive loans of up to \$20,000 for certain solar installations. The loans can fund equipment, labor, permits, fees, and necessary building upgrades for a solar home project.
- **Solar Leases and Power Purchase Agreements (PPAs):** Cities should ensure that customers are able to lease solar installations through local solar installers over time. In a [solar lease or PPA](#), the homeowner does not own the solar panels on their rooftop, but essentially rents the system from a local installer. The homeowner benefits from the energy that the solar panels generate, while the installer maintains the system and receives any applicable tax credits. In order to [allow solar leases and PPAs](#), cities and states must allow companies that install solar panels to sell electricity to their customers without subjecting them to the same regulations as large utilities.

Solar financing options give more residents and businesses access to clean energy.

CASE STUDIES

Hundreds of cities have enabled these and other solar financing options, and are seeing faster adoption as a result. Here are a few examples:

- **The City of San Diego**, which is [a leader in total installed solar capacity](#), allows residents and businesses to select from [eight providers](#) that have been authorized by the city to provide PACE financing.
- Thanks to legislation that enables residential PACE loans in the state of Missouri, **the City of St. Louis** offers funding to residential, commercial, industrial and multi-family properties in the city to finance energy efficiency and renewable energy property improvements through its [Set the PACE St. Louis](#) program.
- Since the **Milwaukee Shines program** was founded [in 2008](#) and the city began providing financing resources for home and business owners, the city has exceeded its goal of 1 MW of solar capacity significantly. As of January 2019, Milwaukee homes and businesses have more than 3.6 MW of solar energy installed.
