

OPEN SAFE OREGON

Is the state effectively containing the novel coronavirus (“COVID-19”)?
Data current as of 6/28/2020

STATUS: RED

COVID Exit Strategy (www.covidexitstrategy.org), a non-partisan group of public health and crisis experts, has been tracking the progress states have made towards meeting the CDC recommended benchmarks states should reach before reopening their economies. As of June 28th, only three states were meeting these metrics, earning a “Green” rating. Currently, Oregon is failing half of the benchmarks, and is rated “Red.”

CDC Benchmark: a 14-day decline in influenza-like illness

The CDC recommends that states report a 14-day decline in influenza-like illness (“ILI”) before lifting restrictions. Oregon **HAS MET** this benchmark. ILI numbers for outpatient and Emergency Room (“ER”) visits are reported to the CDC weekly. Oregon reported a decrease in ILI from 316 to 279 between the week ending June 13th and the week ending June 27th.

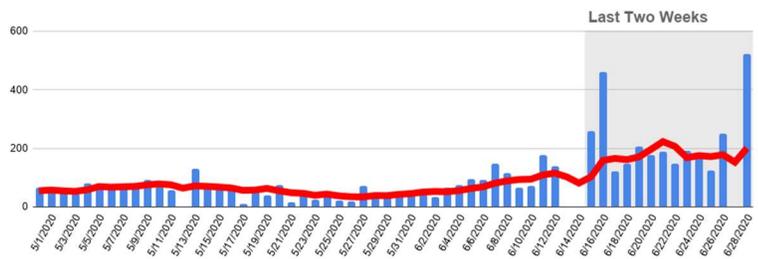

Oregon - Weekly Total Outpatient / ER visits for ILI

CDC Benchmark: declining COVID+

The CDC recommends a state show a 14-day decline in documented cases of COVID-19 before reopening. Oregon has **NOT MET** this benchmark. COVID+ cases have been increasing in the state over the last 14 days.

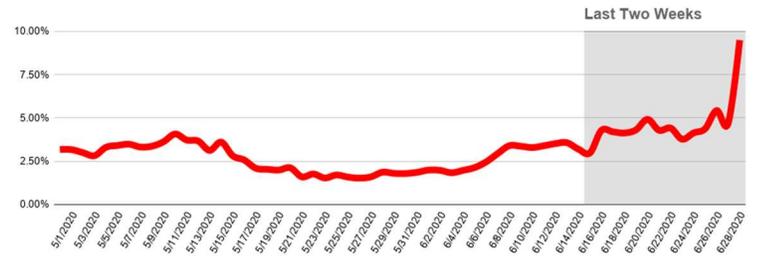

Oregon - Last 60 days of new COVID+ Cases with 7-day Trend

CDC Benchmark: testing

The CDC recommends a state show a downward trajectory for the percentage of COVID-19 tests that are positive before reopening. Oregon has **NOT MET** this benchmark. Test positivity has been increasing in the state over the last 14 days.

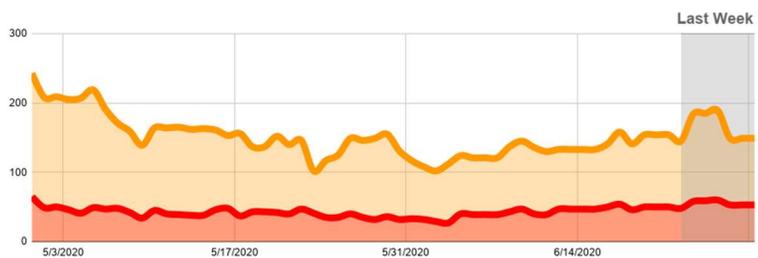

Oregon - COVID-19 diagnostic test positivity over last 60-days (7-day Moving average)

CDC Benchmark: hospital capacity

The CDC recommends a state have sufficient hospital capacity to treat all patients without crisis care (20% capacity available over last 7 days). Oregon **HAS MET** this benchmark. The highest reported occupancy in the last week was 63% for inpatient and 69% for Oregon ICUs.

Oregon - Hospital & ICU occupancy for COVID+ patients over last 60 days

Recommendations

Oregon is currently failing 2 out of 4 the CDC benchmarks that OSPIRG has been tracking, indicating that COVID-19 has been spreading in the community without effective containment. OSPIRG recommends that the state maintain all current restrictions related to COVID-19, and take additional measures to improve containment. These measures could include: a statewide face-covering mandate for public indoor spaces, prohibiting indoor seating at restaurants and bars, and closing all non-essential businesses in current COVID-19 hot-spots if current trends continue.
