| EXECUTIVE SUMMARY

Last March, a 37-year-old woman told the Consumer Product Safety Commission (CPSC) the carbon monoxide detector went off in her house. She suspected her gas range, made by ZLINE Kitchen and Bath of Nevada. She said ZLINE told her to get the local gas company to inspect it. The gas company said the range was indeed the culprit, according to [a complaint filed](#) with the CPSC. She said ZLINE initially refused to help, telling her the product was out of warranty.

Nine months and 43 other complaints about carbon monoxide later, [ZLINE issued a recall](#) on 28,000 gas ranges because they “can emit dangerous levels of carbon monoxide (CO) while in use, posing a serious risk of injury or death from carbon monoxide poisoning,” according to the December [recall notice](#) published by the CPSC.

Of the 44 cases, three led to individuals seeking medical attention. The emission of [carbon monoxide](#), which is colorless and odorless, can lead to death. Fortunately, no one died.

The ZLINE problem was one of 292 recalls announced by the CPSC in 2022. The CPSC has authority over [more than 15,000 types of products](#), from appliances to zippers. Recalls can occur when testing shows a consumer product doesn’t meet safety standards or when a product has been connected with potentially dangerous incidents, injuries,

illnesses or deaths. Consumers are instructed to either discard or return the recalled product and get a refund, or contact the company about repairs.

A new analysis of 2022 CPSC recall data by U.S. PIRG Education Fund produced several key findings:

- There were 33% more recall announcements in 2022 compared with 2021. In 2022, there were 292 recalls, up from 219 in 2021.
- It’s clear from incident reports that products frequently are connected to serious incidents and sometimes even injuries, yet it often takes months or even years for a recall to be issued.
- Recalls are sometimes announced a second or third time. It’s also clear from these re-announcements that injuries often continue to occur long after the recall. For example, last year Generac Power Systems of Wisconsin [renewed its recall](#) on certain portable generators. The generators were recalled because an “unlocked handle can pin a person’s fingers against the generator frame when the generator is moved, posing a finger amputation and crushing hazards.” When the recall was [initially issued in July 2021](#), Generac said there were eight reports of injuries, seven resulting in finger amputations. By

[November 2022](#), 16 months after the recall, Generac said it had 37 reports of injuries, 24 resulting in finger amputations.

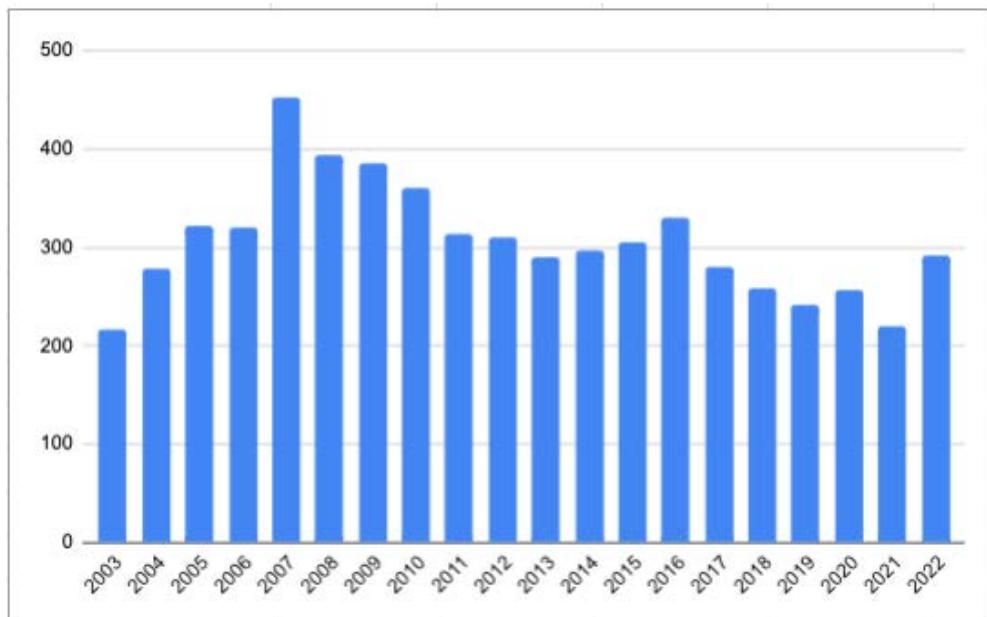

- Among last year's 292 recalls, 65 of them – or 22% – involved injuries or deaths.
- Those 65 recalls disclosed 652 injuries and six deaths.
- About 85 recalls involved products for babies or children or that pose a risk for babies or children.
- Other categories with a large number of recalls: furniture, furnishings and decor with 29; kitchen with 17; electronics with 12; and clothing, and yard and garden, each with 10.
- Leading reasons for recalls include: 49 for risk of fire, 32 for risk of poisoning, 25 because they're a choking hazard and 18 because of excessive levels of lead.

Last year, a product recall was announced every 30 hours on average. The problem isn't the number of recalls – it's that the products aren't safe to begin with.

Improving product safety is the overall goal.

At the same time, regulators and lawmakers need to look at why some unsafe products don't get recalled sooner and why consumers continue to use dangerous products after a recall.

PRODUCT RECALLS OVER THE LAST 20 YEARS

SOURCE: CPSC

During the last 20 years, recalls of everything from refrigerators to clothing to toys hit a high in 2007. Since then, they've been mostly trending down until last year.

I HOW DO UNSAFE PRODUCTS GET TO MARKET?

The 292 recalls in 2022 were the most since 2016, when there were 330.

Before 2022, the annual average for the previous five years was 251. For the five years before that, the average was 306.

It's notable that recalls soared by 33% last year. What drove that? Were there more dangerous products, or was enforcement better, or were more consumers reporting problems that were investigated?

"It is hard to assess the cause of year-to-year variations," CPSC Chair Alex Hoehn-Saric told U.S. PIRG Education Fund. "I like to think that our increased enforcement efforts are encouraging more and faster reporting and remedies by companies. Of course, as industry prioritizes safety, I'd hope the number of recalls will go down as products become safer."

Most consumers trust that, when they buy a product, it's safe. It's assumed that products have gone through testing and meet certain safety standards, many required by federal law. Yet that's often not the case, or a defect surfaces, and the product later gets recalled.

Here are key safeguards that are in place:

- About 250 types of "general use products" are required to comply with [various safety standards](#), which differ from product to product. The rules cover a range of items,

including adhesives and antiquing kits, garage door openers and hair dryers, mattresses and rugs, and wax containers and writing instruments. Manufacturers and importers of these must [pledge in a written certificate](#) that their products comply with applicable rules, which could address issues like [flammability, hazardous substances or child-resistant containers](#).

- Children's products, meaning toys, clothing or any other product [for children 12 and under](#), must comply with a host of much stricter rules, concerning issues such as small parts and lead content, which can cause brain damage and other [neurological problems](#), particularly in children. In addition, federal law mandates that every children's product pass [testing at a CPSC-accepted laboratory](#).
- The CPSC's [Import Surveillance office](#) collaborates with U.S. Customs and Border Protection to identify and inspect various shipments coming into ports that contain consumer products.

But not all products have mandatory standards. It's not OK that the companies don't test them anyway, CPSC Commissioner Richard Trumka told U.S. PIRG Education Fund. Companies simply

should make sure their products are safe before selling them, he said.

Hoehn-Saric, the CPSC chair since 2021, said everyone should realize how much safer products have become because of the CPSC, which started in 1972 under the Consumer Product Safety Act. In addition, Congress has passed a host of laws to make our lives safer. “CPSC’s work to improve the safety of refrigerators, lawn mowers, bicycles, scores of children’s products and hundreds of other household items have saved millions from injury or worse,” Hoehn-Saric said.

But the task is getting more difficult because the marketplace is inundated with more and more consumer products over the years. Most products don’t have mandatory safety standards or certification requirements. So the CPSC must monitor the marketplace to make sure that products that are supposed to meet mandatory standards actually do.

In addition, investigators purchase and test products. “When products fail, we will go after those manufacturers,” the chairman said.

Regulators also depend on complaints from consumers, hospitals and others, often through [saferproducts.gov](https://www.saferproducts.gov), and on reports from the companies themselves.

“When a company continues to sell dangerous products that they know can cause serious injury or death, it must be held accountable.”

CPSC Chair Alex Hoehn-Saric

Children's products, toys, clothing or any other product for children 12 and under, must meet strict standards for issues such as small parts and lead content.

COMPANIES ARE REQUIRED TO REPORT INCIDENTS

Even with products that don't have to comply with specific safety standards, [companies must report to the CPSC](#), within 24 hours, anytime they receive information that "reasonably suggests" the product could cause a health or safety hazard, even if no injuries have been reported. The law covers manufacturers, importers, distributors and retailers.

The issues that require an [immediate disclosure](#):

- A defective product that could injure someone.
- A product that "creates an unreasonable risk" that could seriously injure or kill someone.
- A product that doesn't comply with consumer product safety rules.
- A case of a child choking on a marble, small ball, latex balloon or other small part contained in a toy or game and that causes the child to be treated by a medical professional, stop breathing, suffer a serious injury or die.
- For manufacturers and importers, certain kinds of lawsuits.

Every year, the CPSC reviews:

- * **8,000 death certificates connected to a consumer product.**
- * **15.5 million injuries treated in emergency rooms and associated with consumer products.**

I RECALLS SOMETIMES TAKE MONTHS OR YEARS AFTER SERIOUS INCIDENTS. WHY?

While companies are supposed to notify the CPSC of reportable incidents, consumers, doctors, coroners and other officials sometimes file complaints directly with the CPSC through [saferproducts.gov](#). The [CPSC then investigates](#) to determine whether the product represents a hazard or demands “corrective action.”

In some cases, a company will notify the CPSC about a serious incident or death, and the CPSC will discover incidents that weren’t reported. There isn’t necessarily a timetable for determining whether a recall is warranted.

Recalls often come months or years after incidents were reported to the CPSC. A few examples from 2022:

Samsung Top-Load Washing Machines

About 663,500 Samsung top-load washing machines were [recalled Dec. 22, 2022](#), after Samsung received 51 reports of overheating, smoking, melting or fire involving the washers. Ten of those incidents caused property damage. Three injuries from smoke inhalation were reported. The washers were sold from June 2021 through December 2022 for \$900 to \$1,500.

Among the complaints was one that occurred in April and was [reported in June](#), six months before the recall. A consumer reported the circuit board of their Samsung

washer caught fire. No injuries were reported.

Another incident was reported in September, three months before the recall. A [consumer reported to the CPSC](#) that their Samsung washer caught fire while in use. When they noticed black smoke coming from the back of the washer, they went outside and called the fire department. The fire department took the washer. The fire from the washer burnt the top of the dryer, damaged her garage (where the washer was located) and caused smoke damage to the interior of the home.

Another incident [was reported Dec. 14, 2022](#). A consumer said her husband heard a loud pop from the washer while it was running and saw smoking coming from the control panel. The man unplugged the washer and called Samsung. “Samsung keeps giving us a run around about a full refund. They keep insisting on repairing the issue,” the consumer said in the complaint. “I would never feel safe with a repaired product from Samsung. Am I entitled to a full refund? They told me I am not entitled to a refund.”

The Samsung washer was [recalled eight days later](#). The recall remedy was a repair through a free software download. All three of the above incidents involved model numbers included in the recall.

Horizon fitness treadmills

About 192,000 [Horizon fitness treadmills were recalled](#) Oct. 27, 2022, by Johnson Health Tech Trading after Horizon received at least 874 reports of the treadmills unexpectedly changing speed or stopping. The complaints included 71 injury reports, ranging from bruises to broken bones. The treadmills were sold from March 2018 through October 2022 for \$600 to \$1,000.

Among the complaints was one reported 18 months before the recall, for an [incident that occurred in October 2020](#). A 52-year-old consumer said they were on their Horizon treadmill when it abruptly stopped. The consumer also said a repair technician had been to the home twice to fix the issue but the problem remained.

Another [incident was reported seven months](#) before the recall, in March 2021. It occurred three months before that, in December 2021. A 63-year-old woman was hurt after her Horizon treadmill suddenly accelerated and she was thrown to the floor, according to the complaint filed with the CPSC. She suffered injuries to her wrist and shoulder, and a major abrasion on her knee.

In both cases, Johnson Health Tech told the CPSC it was reviewing the information provided by the consumers. It's not publicly known when the other 872 reported incidents occurred.

Fitbit Ionic Smartwatches

About 1 million [Fitbit Ionic smartwatches were recalled](#) in the United States on March 2, 2022, after the company received at least 115 reports in the United States and 59

reports internationally of the lithium-ion watch battery overheating, leading to 78 reports of burn injuries in the United States and 40 burn injuries internationally. The products were sold from September 2017 through December 2021 for \$200 to \$330.

Among the complaints was one that [occurred in April 2020](#) and reported in May 2020, nearly two years before the recall, according to the report filed with the CPSC. The woman said her FitBit caused "dime sized, red, itchy, flaky blisters with rash/burn."

Another incident was [reported in January 2021](#), six days after it occurred. This was 14 months before the recall. The consumer reported a "rash/burn" on their wrist.

FitBit [told the CPSC in 2021](#) it was aware that "skin irritation affects a very limited number of consumers who use wearable devices all day and all night from sweat, water, or soap being held against the skin under the device, or from pressure or friction against the skin" and users should give their wrist a rest and then see a dermatologist if the problem continues. It's not publicly known when the other 172 overheating incidents occurred.

Bestar folding wall beds

About 129,000 [Bestar folding wall beds were recalled](#) in the United States on April 7, 2022, after the company received more than 60 reports of the beds detaching from the wall and falling and hitting people. Among the reports was a case in July 2018, when a 79-year-old woman died after a Bestar wall bed fell on her, injuring her

spine, the recall announcement said. It took nearly four years to recall the product.

The beds were sold from June 2014 through March 2022 for \$1,650 to \$2,200.

ZLINE gas ranges

In the recall mentioned earlier, about [28,000 gas ranges were recalled by ZLINE](#) on Dec. 29, 2022, after the company received 44 complaints about carbon monoxide emission. The gas ranges were sold from February 2019 through December 2022 for \$2,300 to \$5,000. The recall was [expanded last week](#) to include more models.

After [the March complaint](#) filed by the 37-year-old consumer, a couple in their 40s [told the CPSC](#) in September 2022 that they and their two children ages 10 and 13 were awoken in the middle of the night by their carbon monoxide detector. The fire department and gas company evacuated the house; the gas company said the ZLINE gas range was the cause.

The couple reported the level of carbon monoxide was 242 PPM; [a level of 200 or higher](#) can cause illness and be fatal [within hours](#).

ZLINE told the CPSC it worked with both households to refund the purchase price in one case and replace the range in another. It's not publicly known when the other 42 complaints were made.

Hoehn-Saric acknowledged the recall process sometimes takes months or even years if the company isn't cooperative.

When the CPSC is notified by the company, consumers, doctors or government officials of a possible hazardous product, the agency "conducts detailed investigations and analysis to identify the product at issue and the cause of the harm," he said.

"Only after we make those findings can we approach a company to negotiate a recall. This can take months, particularly if products related to an incident are destroyed or thrown away, or other hurdles make the investigation difficult."

Hoehn-Saric added that the "negotiations can become complex" in some cases.

It could be that the product needs a new part, but the CPSC wants to make sure a repair works and doesn't create a new problem, he said.

If that doesn't work and a company refuses to recall a product, he said, "the CPSC can seek to compel a recall through litigation, but that can take years to resolve."

The public finds out about potentially dangerous products more quickly when companies self-report issues and start recalls themselves.

But any of these processes "take tremendous resources and time," Hoehn-Saric said. "More funding to support CPSC's work would make the process more efficient, faster, and more expansive, which would benefit all consumers."

I THE CPSC CAN'T QUICKLY WARN CONSUMERS ABOUT DANGEROUS PRODUCTS

In these cases and hundreds of others like them, both the companies and the CPSC knew of potentially serious issues with products, yet didn't act for months. While few could reasonably expect a recall or announcement within hours, some incidents and injuries would likely be prevented if an announcement or recall occurred sooner than it did.

From the CPSC's standpoint, there's a huge obstacle: [Section 6\(b\)](#) of the [Consumer Product Safety Act](#), which prohibits the CPSC from publicly disclosing derogatory information about a product unless it has notified the company and waited 15 days. That gives the company enough time to file a lawsuit to block the disclosure.

To avoid court battles, the CPSC often negotiates recalls with companies, which can take weeks or months.

In other cases, the CPSC may release a generic warning about a type of product, without identifying the specific product. For example, in 2020, the [CPSC issued a warning](#) about nursing pillows, saying it had "identified deaths possibly associated with pillow-like products and continues to analyze incident data with the goal of determining the risks with these products and providing more clarity to the public on any risks associated with these products."

It took almost a year before a [recall was announced](#) for 3.3 million Boppy Original Newborn Loungers and two related loungers. The CPSC said eight infant deaths were reported in connection with the Boppy Company Newborn Lounger and advised consumers to immediately stop using the products. "Infants can suffocate if they roll, move, or are placed on the lounger in a position that obstructs breathing, or roll off the lounger onto an external surface, such as an adult pillow or soft bedding that obstructs breathing."

In [the announcement](#), the CPSC said the infant deaths occurred between December 2015 and June 2020. So nearly six years passed between the first death in 2015 and the recall in 2021.

In a more recent case, the CPSC on Nov. 16, 2022, did cite a company by name without an actual recall. It [issued a "warning"](#) about the "risk of death and serious injury with Future Motion's Onewheel self-balancing electric skateboards."

The CPSC warned consumers to stop using all Onewheel models after the agency tested Onewheel skateboards and determined they can cause riders to be ejected. "There have been at least four reported deaths between 2019 and 2021 and multiple reports of serious injuries after the product failed to balance the rider or suddenly stopped while

in motion,” the CPSC said. Among the injuries reported: traumatic brain injury, concussion, paralysis and fractures. People shouldn’t ride, buy, sell or donate the Onewheel, the CPSC said.

At least 51 complaints about Onewheel skateboards were filed with the CPSC in 2022. Forty-seven of them said they were ejected or fell after the skateboard stopped or the self-balancing feature stopped. Most reported injuries including broken bones, concussions and cuts. In 42 of the cases, the riders ranged in age from 30 to 58.

In one from September, a 47-year-old said his arm was broken into four pieces and he required surgery. In one from October, a 31-year-old, who said he was wearing a helmet, said he was taken by ambulance and suffered head trauma, broken bones in his face and is now blind in his left eye.

A recall of the Onewheel skateboards has not been announced. The skateboards currently sell for \$1,050 to \$2,200, depending on the model. Future Motion did announce a recall of only the GT model in August for a different issue: The skateboard not stopping.

The CPSC said Future Motion “has refused to agree to an acceptable recall” for all of the skateboards involved. But the CPSC plans to pursue a recall.

Injuries reported directly to the CPSC go back to at least July 2019, when it received a report of an 18-year-old man who was traveling 20 to 30 mph on a Onewheel + skateboard when it stopped suddenly and he was thrown off face first. He was taken by ambulance to the hospital and diagnosed with injuries including severe traumatic brain injury as a result of brain bleeding, seizure-like activity, memory impairment, deteriorating vision, severe balance problems and blunt chest trauma.

Sen. Richard Blumenthal of Connecticut, a longtime product safety proponent, told U.S. PIRG Education Fund the analysis of all of these cases in this report makes it clear change is needed.

“U.S. PIRG’s new report reaffirms the urgent need to improve slow and ineffective product recalls that put Americans at risk,” he said.

“Current CPSC constraints cause delays of months—or even years—all while dangerous products remain in homes across the country, injuring or killing more people,” Blumenthal added. “My Sunshine in Product Safety Act would eliminate such barriers and must be swiftly passed to ensure the CPSC can do its job of protecting consumers.”

I COMPANIES SOMETIMES DELAY NOTIFYING THE CPSC OF A PROBLEM

In other cases, action by the CPSC could be delayed because a company didn't notify the CPSC of an incident as required. Hoehn-Saric said the CPSC sometimes doesn't learn about problems until years after an injury.

The [law says](#) failure to furnish information required by Section 15(b) could lead to "substantial civil *and criminal* penalties." A few examples from 2022:

Vornado Air space heaters

On [July 7, 2022](#), Vornado Air LLC of Kansas agreed to pay a \$7.5 million [civil penalty](#). The CPSC said Vornado failed to immediately report that its VH101 Personal Vortex electric space heater "contained a defect or created an unreasonable risk of serious injury." The CPSC said Vornado had investigated multiple consumer reports of fire but did not immediately notify the CPSC.

Then in December 2017, a 90-year-old Minnesota man died in a fire involving a Vornado space heater, [Vornado told the CPSC](#) in January 2018.

About 350,000 of the heaters were [recalled](#) three months later. The heaters sold for about \$30. The recall was [re-announced](#) on August 22, 2018, after Vornado confirmed the heater involved in the man's death was a

VH101. Vornado received 19 reports of the heaters catching on fire.

Clawfoot Supply shower seats

On [Sept. 15, 2022](#), Clawfoot Supply, LLC, of Kentucky, agreed to pay a \$6 million [civil penalty](#). The CPSC said Clawfoot failed to immediately report that its Wall-Mounted Teak Folding Shower Seats "contained a defect that could create a substantial product hazard and created an unreasonable risk of serious injury to consumers."

Clawfoot received reports of problems beginning in 2011 and into 2018, but filed its first report with the CPSC in July 2018. The consumer complaints included incidents where the seats broke while someone was sitting on it, leading to injury. About 7,200 Wall-Mounted Shower Seats [were recalled five months after the report](#) to the CPSC, on Dec. 4, 2018. The shower seats were sold from January 2011 to July 2018, for \$150 to \$160.

At the time of the recall, the company received [194 reports](#) of the shower seats breaking, including 23 reports of injuries ranging from scrapes and bruises to cuts requiring stitches to one lumbar fracture.

Core Health exercise machines

On [Jan. 31, 2022](#), Core Health & Fitness LLC of Washington agreed to pay a \$6.5 million civil penalty. The CPSC said Core

failed to immediately report that its Cable Cross Over Machines and Dual Adjustable Pulley Machines “contained a defect or created an unreasonable risk of serious injury.” The issue: “between 2012 and February 2017, Core received 55 complaints involving falling carriages, including 11 incidents that caused head lacerations requiring stitches or staples,” [according to the settlement agreement](#).

Twenty other injuries were [later reported](#).

Core filed a report with the CPSC in February 2017. About 3,600 machines were [recalled five months later, on July 12, 2017](#). The machines sold for \$2,700 to \$8,400.

Peloton treadmills

Finally, the [most recent case](#) that points to the not infrequent lack of compliance was the huge settlement involving Peloton Interactive Inc. of New York. The CPSC said Jan. 5, 2023, that Peloton agreed on Dec. 28, 2022, to pay a \$19.1 million [civil penalty](#). The CPSC said Peloton “knowingly failed to immediately report” that its Tread+ treadmill “contained a defect that could create a substantial product hazard and created an unreasonable risk of serious injury to consumers.”

Beginning in December 2018 and into 2019, Peloton received complaints involving people and pets being pulled under and entrapped in the rear of the treadmill, with some leading to injuries. Peloton didn’t report any incidents to the CPSC until [March 4, 2021](#), a day after learning that a 6-year-old child had died after being entrapped under the rear of the Tread+ treadmill.

“By the time Peloton filed a report with the Commission there were more than 150 reports of people, pets, and/or objects being pulled under the rear of the Tread+ treadmill, including the death of a child and 13 injuries, including broken bones, lacerations, abrasions and friction burns,” the CPSC said.

About 125,000 Tread+ treadmills [were recalled](#) two months after the report to the CPSC, on May 5, 2021. The treadmills sold for about \$4,295.

Hoehn-Saric, the CPSC chair, [said in a statement](#) in January 2023: “When a company continues to sell dangerous products that they know can cause serious injury or death, it must be held accountable.”

Noting the commission voted unanimously to approve the settlement, Hoehn-Saric said: “By acting with one voice, the CPSC sends a loud and clear warning to companies who continue to sell dangerous products that they know can cause serious injury or death. In Peloton’s case, despite becoming aware of more than 150 reported incidents of persons, pets and/or objects being pulled under the rear of the Tread+ treadmill it was not until after receiving notice that a 6-year-old child had died after being entrapped under the rear of the treadmill that Peloton reported these incidents to the CPSC.

“By failing to report these incidents to the Commission immediately, Peloton not only violated the Consumer Product Safety Act, but also consumers’ trust.”

Meanwhile, Commissioner Peter Feldman said enforcement actions are uneven and not severe enough in some cases. He voted in favor of the Peloton settlement [but said](#): “I remain concerned that CPSC lacks a coherent enforcement policy when it comes to civil penalties … Without principled decision-making, the product safety community will remain confused about the expectations the Commission is setting for how we will deal with similar conduct.”

A CPSC team monitors marketplaces for recalled and banned items. In 2022, more than 57,800 products were pulled from websites because of this enforcement.

I EVEN AFTER RECALLS, INCIDENTS AND INJURIES CONTINUE. WHY?

Consumers don't find out or disregard the warnings

In July 2022, a 38-year-old consumer [told the CPSC](#) their Insignia 10-Quart Digital Airfryer caught on fire the previous month. It had been purchased at Best Buy four months earlier. But [a recall](#) for about 635,000 of the air fryers had been issued *two months before* the incident, in April 2022, because the air fryers could overheat, posing fire and burn hazards.

Cases like these lead you to wonder whether the consumer didn't know about the danger, or brushed it aside. There are many, many more incidents like this. Here are a couple of them:

On May 7, 2022, a 42-year-old consumer [told the CPSC](#) the door handle came off the bottom freezer of her GE refrigerator/freezer when she tried to open the freezer the day before, causing her to fall back into the counter. Three weeks earlier, about 155,000 of the refrigerators, including her model number, [had been recalled](#). The recall notice said: "The freezer handle can detach when a consumer tries to open the freezer drawer, posing a fall hazard to the consumer."

On June 23, 2022, a [consumer's](#) ice maker on their Frigidaire side-by-side refrigerator started "spitting out plastic pieces and these pieces have been found in the ice when

dispensed; I have saved these pieces," [they reported to the CPSC](#). Three weeks before the incident, 367,500 Frigidaire and Electrolux refrigerators [had been recalled](#) because "the ice level detector arm in the ice maker can break into pieces and fall into the ice bucket, posing a choking hazard." The recall included this person's model. Electrolux, the manufacturer, "received 185 reports of the ice level detectors breaking, including one report of gum lacerations," the CPSC said. Consumers were instructed to stop using the refrigerators' ice makers, empty the ice bucket and contact the company to schedule a technician to replace the ice maker at no charge.

Trumka said he believes the CPSC is doing a better job of warning consumers by identifying recalled products by their brand name in the headlines of recall notices. The announcements also usually include a list of retailers that sold the item.

In addition, Hoehn-Saric said, CPSC recall notices are now providing consumers with direct links to contact the company for a refund, replacement or repair. "In the past, the links often went to the home page of a company leading to frustration and confusion," he said.

Despite that, items often remain in people's homes because it's too "arduous" for consumers to try to get a refund,

replacement or repair, Trumka told U.S. PIRG Education Fund. The CPSC needs to do more to “secure a remedy that is worth consumers’ time to pursue,” he said. “If not, items that pose a hazard will stay in circulation.”

Trumka recommends a full refund for anyone possessing a recalled product, without requiring a receipt. “Who keeps those?” he asked. Repairs or replacements may be appropriate in some cases. “Key to all of these solutions is ensuring that the process is quick and easy for the consumer,” Trumka said.

Retailers sometimes continue selling recalled products

In other cases, the problem is compounded because retailers continue to sell products after they’re recalled. It is illegal to sell a recalled product. This [applies not only](#) to traditional merchants, but also thrift stores, consignment shops and individuals holding yard sales and flea markets.

In a guide for anyone selling products [CPSC says](#): “It is illegal to sell any recalled product. If you are in the business of reselling products, you are expected to know the laws, rules, and regulations that apply to your business, including whether a product you are selling has been recalled for a safety issue. It is unlawful to offer recalled products for sale under Section 19 of the Consumer Product Safety Act (15 U.S.C. § 2068), so having the recalled product in inventory is a violation of federal law.”

While some recalled products may get sold at garage sales or through small websites out of ignorance, many cases involve some of the nation’s largest merchants:

On Aug. 2, 2022, [the CPSC said The TJX Companies agreed](#) to pay a \$13 million [civil penalty](#) after it “knowingly sold, offered for sale, and distributed approximately 1,200 recalled products... during a five-year period from March 2014 through October 2019.” The CPSC said TJX sold, offered and distributed the recalled products through its stores including T.J. Maxx, Marshalls and HomeGoods, and online.

The [majority of the illegal sales involved](#) products recalled because of the risk of infant suffocation and death. They included the Kids2 Rocking Sleepers, Fisher-Price Rock ‘n Play Sleepers and Fisher-Price Inclined Sleeper Accessory for Ultra-Lite Day & Night Play Yards. [Other products included](#) recalled kitchen items, children’s clothing and foldable lounge chairs.

The settlement was opposed by CPSC Commissioner Peter Feldman, who [said in a statement](#): “There is evidence that TJX continued to sell products for almost two years after the Commission notified it to stop. TJX actively ignored recalls and did not employ its inventory control technology responsibly. These illegal sales, and the fact that they went on for years, evidence, at best, systemic issues with TJX’s internal controls and, at worst, callous disregard for the laws we enforce ...”

“Given that TJX is a repeat offender that has failed to monitor itself in the past, the proposed order’s injunctive requirements are meaningless without some external verification to ensure the terms of the agreement are met, Feldman said.

“A central purpose of CPSC’s civil penalty authority is to deter violations. While the fine here may seem significant, it is nowhere near the maximum relief we could have sought. In the case of a company that had almost \$3.3 billion in profits and \$49 billion in sales last year, I fear this \$13 million fine, even with the mild injunctive relief TJX is agreeing to, amounts to nothing more than a parking ticket for TJX, a minor inconvenience.”

This wasn’t the first time a large national retailer agreed to settle claims that it illegally sold recalled products.

In 2017, [Home Depot agreed to pay](#) a \$5.7 million civil penalty to [settle charges](#) that it “knowingly sold and distributed” about 2,816 recalled products from 33 separate recalls during a four-year period from August 2012 through November 2016. The products were recalled because of risks including fire, laceration, and electrocution and shock hazards. The products included smoke detectors, lights and space heaters.

In 2016, [Best Buy agreed to pay a \\$3.8 million](#) civil penalty to [settle charges](#) it “knowingly sold and distributed 16 different recalled products during a five-year period from 2010 through 2015.” The products included recalled computers, TVs and

appliances. The CPSC said Best Buy didn’t have adequate procedures to identify and prevent sales. “Sales of recalled products continued even after Best Buy told CPSC that the firm had put measures into place to reduce the risk of sales of recalled products,” the CPSC said.

Hoehn-Saric said the CPSC has increased enforcement against companies that illegally sell recalled products. He expects the civil penalties against violators will have “deterrent value” and lead retailers to do better.

Illegal sales may be a bigger issue on the secondary market, on platforms such as Facebook Marketplace, eBay and other online resellers. “There is no question that secondary market sales continue to be a problem,” Hoehn-Saric said.

He said the CPSC has “an entire team” focused on monitoring marketplaces and notifying them to remove listings for recalled and banned items. In 2022, more than 57,800 products were pulled from websites because of this enforcement. He added that most platforms “are responsive” to requests, but it shouldn’t come to that. Online retailers should do more to make sure recalled products don’t get listed to begin with. ”Platforms can and should do more to protect consumers,” he said.

In an investigation last fall for our [Trouble in Toyland](#) report, U.S. PIRG Education Fund set out to see how many recalled toys we could buy online. In one month, we bought more than 30 previously recalled toys through eBay, Facebook Marketplace

and several smaller sites. In two cases, eBay sent us an email *after* we received the toy to disclose that it had been recalled months earlier.

Recalled products being sold on the secondary market is not a new problem.

For example, in a letter nearly a year ago, two members of Congress wrote a letter to Facebook Marketplace parent Meta that the company should take meaningful steps to make sure recalled products aren't being sold on its platform. [The letter](#) was sent by Sen. Richard Blumenthal (D-CT) and Rep. Jan Schakowsky (D-IL), who were then chairs of their respective subcommittees on consumer protection issues.

The two called on Meta to automatically prevent listings for recalled products, as it does with other illegal items, and launch a tool so consumers can report any recalled product that slips through.

"Meta's continued failure to do so indicates a remarkable dereliction of duty by your company on behalf of your users," the letter said.

RETAILERS THAT HAVE PAID CIVIL PENALTIES FOR SELLING RECALLED PRODUCTS:

**TJX (TJ Maxx)
Best Buy
Home Depot**

I SOMETIMES, THE PUBLIC NEEDS REMINDED ABOUT A RECALL

The CPSC sometimes “reannounces” recalls when it believes that consumers don’t know that products they own have been recalled, or they don’t act on that information, or, in a few cases, the products continue to be sold illegally after the recall, as highlighted in the previous section.

In January 2023, [Fisher-Price, working with the CPSC, reannounced](#) the 2019 recall of 4.7 million Rock ‘n’ Play Sleepers after at least eight babies died after the [initial recall](#). Overall, about 100 infants died while in the Rock ‘n’ Play Sleepers. On the same day, [Kids2 reannounced](#) a 2019 recall of about 694,000 Rocking Sleepers after at least four babies died after the [initial recall](#).

“We are issuing this announcement because, despite their removal from the marketplace and a prohibition on their sale, babies continue to die in these products,” [Hoehn-Saric, the CPSC chair, said](#) in a statement. “I urge all parents, grandparents, and caregivers to follow the guidance of this announcement and stop using these products immediately.”

In the case of the Fisher-Price recall, Trumka, the CPSC commissioner, [said in a statement](#) that Fisher-Price did a poor job of handling the recall by offering refunds only to consumers who’d bought the product during a six-month period, when it had been for sale for 10 years. Other consumers were

offered vouchers, which could take three to four months to get, meaning the infants may no longer be infants by the time they could get a replacement product.

“Companies save money when people do not participate in their recalls,” Trumka said. “When that happens, dangerous products stay in homes. We have seen that lead to deaths.”

The other recent significant announcement came in November from [Generac Power Systems regarding portable generators](#). The generators were originally [recalled in July 2021](#) because an unlocked handle can pin a person’s fingers against the generator frame when the generator is moved, posing a finger amputation and crushing hazard.

At the time of the initial recall, Generac said there were eight reports of injuries, seven resulting in finger amputations. By [November 2022](#), 16 months after the recall, Generac said the number of injuries had more than quadrupled, with 37 reports of injuries, 24 resulting in finger amputations.

Going back a few years, [Gree](#) Electric Appliances in 2016 reannounced recalls of 2.5 million dehumidifiers it manufactured under several brands, including Frigidaire, GE, Kenmore and SoleusAir. The dehumidifiers sold for \$110 to \$400.

The 2016 announcement said there were more than 2,000 complaints of the dehumidifiers overheating. About 450 incidents led to fires, causing more than \$19 million in property damage. This recall was first announced in [September 2013](#) and expanded in [January 2014](#).

In 2013, only 325 complaints had been reported, including 71 fires that caused \$2.7 million in property damage.

This leads to the big question: What can be done to improve consumer and retailer awareness?

**The CPSC issues
reannouncements
when serious incidents
continue to happen
months or years after a
recall.**

I THERE ARE LIMITED WAYS FOR CONSUMERS TO FIND OUT ABOUT RECALLS

A big problem with consumers not knowing about recalls: There aren't effective ways to alert people to every recall involving every item they own or use. Nearly 2,800 consumer products have been recalled in the last decade. Some are massive recalls involving millions of products connected with serious injuries or deaths. These often get covered by news organizations and may get shared on social media.

Other recalls involve only a few hundred products sold and haven't been associated with any injuries. These are less likely to garner media attention. And even if they did, at some point consumers may tune out the recall-of-the-day alert.

One way consumers can learn about recalls involving products they bought: If they register their information with the company. Consumers may do this with expensive items that could later have warranty claims. They're less likely to do it with a \$2 coffee mug or a \$3 bottle of cleaner or even a \$35 tea kettle. But if they've registered their contact information with the company, the company can issue recall notices directly.

Consumers can also learn about recalls through the CPSC's website, [saferproducts.gov](https://www.saferproducts.gov). The search function for specific items is good, but who is going to periodically search the site for products they own? It might be reasonable, and smart, for

consumers to set reminders to look periodically for any recalls involving their appliances and toys their kids play with. Unfortunately, that isn't likely to be a habit most consumers adopt.

"Making sure consumers are aware and act on recalls is a priority for me," Hoehn-Saric told U.S. PIRG Education Fund. The CPSC has taken some steps to improve consumer awareness, he said. "For example, wherever possible CPSC expects recalling firms to provide direct notice of the recall to everyone who bought the product. With more and more Americans shopping online, there are more opportunities for direct notice."

Clearly, if someone buys something online, the merchant has the shopper's contact information. The more that companies reach out, the more consumers will learn about recalls, Hoehn-Saric said.

Sen. Maria Cantwell, (D-Wash.), chair of the Senate Committee on Commerce, Science and Transportation, [has called the product recall system](#) "ineffective." In a 2021 subcommittee hearing on product safety issues that surface around the holidays, she said the CPSC has reported that consumers follow through with recalls in only about 6% of cases.

"I am deeply concerned about how well our current system protects consumers, particularly children, from unsafe products," Cantwell said in [a statement](#). "We need to do better. Too often product recalls are not effective at getting dangerous products out of circulation."

In a [letter to the CPSC](#), she said that a few things that would improve recall effectiveness:

- Strong, enforceable agreements with companies.
- Better incentives for manufacturers, retailers, and consumers to comply with recalls.
- More data and better ways to track recall effectiveness.

Drilling down a bit more, the [CPSC said in 2017](#) that recalled products with a retail price of less than \$20 were corrected or fixed by consumers only about 4% of the time. Recalled products with the retail price of \$10,000 or more were corrected or fixed about 32% of the time.

**Some companies
require a receipt to get
a full refund for a
recalled product. "Who
keeps those?"**

**CPSC Commissioner
Richard Trumka**

CONCLUSION AND RECOMMENDATIONS

1. Congress should allow regulators to warn consumers

In April 2021, the [Sunshine in Product Safety Act](#) was introduced. The bill would allow regulators to be more transparent with consumers about dangers in the marketplace without being vetoed by the companies themselves.

Section 6(b) of the existing [Consumer Product Safety Act](#) prohibits the CPSC from publicly disclosing derogatory information about a product unless it has notified the company and waited 15 days. That gives the company enough time to file a lawsuit to block the disclosure.

“The Sunshine in Product Safety Act puts consumer safety first,” Blumenthal, the Senator who introduced the bill, [said in a statement](#).

“CPSC must be able to move swiftly to warn Americans when products like the Peloton Tread+ and the Fisher-Price Rock ’n Play Sleeper pose a danger to them and their families,” Blumenthal said. “Yet current regulatory constraints allow companies to call the shots on how and when to notify the public about their hazardous products, keeping important safety information from the public. This bill will eliminate these constraints, restoring transparency to product safety for the sake of consumers.”

The Sunshine bill, or something like it, should be introduced in the new Congress and passed.

2. Require companies to do more

Companies with recalled products should be required to spend more money to alert consumers. Besides notifying customers who’ve provided contact information, companies could amplify the recall through social media, and targeted advertising and newspaper legal notices.

3. Give the CPSC more resources

The CPSC is supposed to protect the public from dangers that may exist with 15,000 different kinds of consumer products. The CPSC has the authority to set mandatory safety standards; influence voluntary safety standards; require labeling; force hazardous products to be removed from store shelves; order product recalls; educate the public about product safety; and collect and analyze data about injuries, death and incidents.

The CPSC reviews about 8,000 unintentional product-related death certificates each year, and tracks at least 15.5 million injuries each year that are treated in emergency rooms and associated with consumer products.

The CPSC’s “current funding is woefully inadequate,” the agency’s former Acting Chair Robert Adler [wrote in a letter](#) to the House appropriations committee in 2021.

He said:

- The CPSC’s \$135 million annual budget at that time was the smallest of all of the federal health and safety regulatory agencies.

- The CPSC needs more resources to better protect consumers.
- The budget of the Food and Drug Administration (FDA) works out to \$10 per person in the United States in 2021. The CPSC, by comparison, comes in at 40 cents per person.
- For the five previous years, the average budget increase for the CPSC was only 1.6% compared with 2.7% for the National Highway Traffic Safety Administration and 4.8% for FDA. “Notwithstanding these budget disparities, CPSC must still serve and protect the same 330 million Americans as our sister agencies,” Adler wrote.

PIRG and other consumer advocates pushed for a FY22 CPSC budget twice as large as what was approved. The 2021 letter was also signed by the American Academy of Pediatrics, Consumer Federation of America, Consumer Reports and Kids In Danger.

We noted the additional CPSC funding would allow the 539-person agency to expand product testing, increase staff at major U.S. ports, increase oversight, get dangerous products recalled more quickly and improve consumer awareness of recalls.

The CPSC’s budget did increase to [\\$139 million](#) in 2022. That’s still below what it needs to better protect consumers. It [requested \\$195 million](#) for FY23 but is [receiving only \\$152.5 million](#).

Trumka of the CPSC said investigations and actions against a company, if necessary, take time. “The more resources we have, the

more we can do to protect consumers. And the more resources we have, the faster we can act to protect consumers.”

4. The CPSC’s recalls website needs to be improved

Consumers are encouraged to [sign up to receive email alerts](#) when products are recalled, but there’s a recall almost every day on average. At some point, consumers will become numb to the emails – the vast majority which won’t be of interest to them.

There should be a way to filter and receive recall emails only on certain categories of products, such as toys, kitchen appliances or power tools. Alerts by brand name would be even better.

5. The [saferproducts.gov](#) site needs improvement

For consumers searching for past complaints or incidents about a particular product, it’s often not easy to find reports. For example, if you search for reports about an XYZ brand refrigerator and you type in “XYZ refrigerator,” it will show you every report mentioning either: any product made by XYZ, or any brand of refrigerator. It can be cumbersome to wade through the complaint summaries of reports that aren’t what you’re looking for.

Using the site’s “advanced search” function does help a bit. But the search results are erratic. And if you want to amend a search where you entered numerous search parameters, the process just isn’t very user-friendly.

I TIPS FOR CONSUMERS TO BUY SAFER PRODUCTS AND LEARN ABOUT RECALLS

- If you're considering buying a product, especially an expensive purchase or an item for a child, check for recalls on cpsc.gov/recalls and for complaints on saferproducts.gov
- The government logs a list of product recalls online. Besides [CPSC recalls](#), try [recalls.gov](#) for recalls across other consumer protection agencies.
- Fill out online or mail-in registrations that come with products. Then companies can contact you in case of issues.
- Use extra caution when buying from resale websites. It's illegal for primary or secondary platforms to sell recalled products, Individual consumers offering products for sale may not know an item has been recalled. Check on cpsc.gov/recalls before you buy.
- Use even more caution when buying products being shipped from overseas or from websites that seem unsophisticated or that give you pause. International sellers may not comply with U.S. safety standards, and unethical sellers may peddle all sorts of previously recalled or unsafe merchandise.
- With your appliances, electronics, toys or other items used by children, and with any other category of products where recalls are common, search periodically for recalls involving your possessions on cpsc.gov/recalls and search for complaints on saferproducts.gov
- If you experience an issue with a product and want to warn other consumers and report it to regulators, you can file a report at saferproducts.gov

I METHODOLOGY

We used two primary sources at the Consumer Product Safety Commission: the recalls database at [cpsc.gov/recalls](https://www.cpsc.gov/recalls), and [saferproducts.gov](https://www.saferproducts.gov)

The first one, [cpsc.gov/recalls](https://www.cpsc.gov/recalls), is the CPSC's official list of all recalls announced in cooperation with companies. The second one, [saferproducts.gov](https://www.saferproducts.gov), includes all reports and complaints for a selected period of time, usually from consumers, physicians, coroners or other officials.

On cpsc.gov/recalls, we analyzed all 292 recalls issued in 2022, and also compared the numbers and trends with years past. We looked at issues including types of products and the hazards cited, such as fire, poisoning, lead or choking hazard.

On saferproducts.gov, we reviewed and analyzed 3,614 reports for 2022, most from consumers reporting problems, incidents or injuries in connection with various consumer products. Some are from physicians, coroners or other officials. The reports usually contain information including a narrative of the issue, the person's age, the brand and model of the product, the date of the incident, the date the product was purchased, the date of the report and the date it was forwarded to the company. The reports sometimes include comments from the company, if it has replied to the CPSC after the complaint was forwarded.

We also used the [saferproducts.gov](https://www.saferproducts.gov) search function to look for complaints about specific products or types of products cited in recalls.

APPENDIX

Searching for complaints or reports

The "Advanced Search" function at saferproducts.gov allows people to search for complaints or incidents involving any type of product. The site is good, but it could be more user-friendly.

2022 PRODUCT RECALLS FROM THE CPSC

(most recent ones first)

Date	Recall Heading	Hazard Description	Units	Incidents
December 29, 2022	ZLINE Recalls Gas Ranges	Risk of injury or death from carbon monoxide poisoning.	28,000	The firm has received 44 reports of carbon monoxide emission, including three reports of consumers seeking medical attention.
December 29, 2022	Surf 9 Recalls Body Glove Tandem and ULI Inflatable Paddle Boards (Costco)	Paddle boards can deflate unexpectedly, posing a drowning hazard.	13,300	Surf 9 has received 3 reports of the Body Glove boards deflating. No injuries reported.
December 29, 2022	Yamaha Recalls Viking Off-Road Side-by-Side Vehicles	Parking brake could fail, posing crash and injury	500	None reported
December 22, 2022	Nova Medical Products Recalls Adult Bed Rails	Risk of serious entrapment and death by asphyxiation.	20,000	None reported
December 22, 2022	Samsung Recalls Top-Load Washing Machines	Washing machines can short-circuit and overheat, posing a fire hazard.	663,500	Samsung has received 51 reports of smoking, melting, overheating or fire involving the washers, 10 of which resulted in property damage. Three consumers have reported injuries due to smoke inhalation.
December 22, 2022	Target Recalls Children's Pillowfort Weighted Blankets	A young child can become entrapped by unzipping and entering the blanket, posing a risk of death by asphyxiation.	204,000	A 4-year-old girl and a 6-year-old girl reportedly became entrapped in the cover of the weighted blanket and died due to asphyxia at Camp Lejeune, N.C., in April 2022. Target has received 4 reports of children becoming entrapped in these weighted blankets, including the 2 fatalities.
December 22, 2022	Pacific Cycle Recalls Pacific Kids' Igniter and Pacific Bubble Pop 20-Inch Bicycles (Target)	Bicycle's handlebar can become loose during use, posing a fall hazard.	147,000	The firm has received 23 reports of incidents of the bicycle's handlebars becoming loose during use. 10 injuries involving bruising and abrasions reported.
December 22, 2022	BLU3 Recalls Nomad Battery-Powered Tankless Diving Systems	The compressor head of the tankless diving system can fracture and restrict air flow, posing a drowning hazard for divers.	1,300	BLU3 has received 21 reports of divers experiencing restricted airflow. No injuries reported.
December 22, 2022	KTM North America Recalls GASGAS Off-Road Motorcycles	An incorrectly programmed CDI box can lead to engine failure, posing crash and injury hazards.	231	None reported
December 15, 2022	ESS Universal USA Recalls Mattresses	Mattresses fail to meet the mandatory federal flammability standard, posing a fire hazard.	1,800	None reported
December 15, 2022	Sundance Spas Recalls Jacuzzi and Sundance Spas Brand Hot Tubs	The temperature sensor can relay incorrect water temperatures and cause the water to be hotter than the set temperature, posing injury (heat stroke) and thermal burn hazards.	23,700	Sundance Spas has received 185 reports of inaccurate temperature readings. No injuries reported.

Date	Recall Heading	Hazard Description	Units	Incidents
December 15, 2022	Rosso Motors Recalls Youth Model All-Terrain Vehicles (ATVs)	The Rosso Motors eQuad X and eQuad Q youth model ATVs exceed the maximum speed limitations for vehicles intended for children ages 6 and older which poses a risk of high-speed crash. Additils to comply with the safety standard requirement. ATVs that fail to meet mandatory safety requirements pose a risk of serious injury or death to consumers.	2,800	None reported
December 15, 2022	Samnyte Tattoo Numbing Creams Recalled (Amazon.com)	The packaging is not child resistant as required by the Poison Prevention Packaging Act.	9,000	None reported
December 15, 2022	Gabby Recalls Fritz Mirrors	The ring and wire hanging mechanism can fail causing the mirror to detach and fall from the wall, posing injury and laceration hazards.	930	The firm has received 7 reports of the mirror detaching and falling. No injuries reported.
December 15, 2022	SIMU Recalls Motors Sold with Awnings and Shutters	The awning and shutter motor's power cable can disconnect while opened or closed manually, posing electric shock and electrocution hazards.	13,800	None reported
December 15, 2022	Advantage Sales & Marketing Recalls Good Matters Three-Wick Candles	Candles can burn at higher than usual temperatures causing the jars to break, posing fire and laceration injury hazards.	30,100	The firm has received 4 reports of the candles catching on fire, cracking or breaking apart while in use, resulting in minor property damage and 1 consumer being burned.
December 15, 2022	Crate And Barrel Recalls Thornhill Baby Cribs	Mattress support pins can become loose or not fit properly causing the mattress to fall, posing a fall hazard.	280	The firm has received 6 reports of incidents of the mattress support pins not fitting correctly or falling out of the crib. No injuries reported.
December 15, 2022	E-Bikes Distributed by Gyroor Recalled	The e-bike's battery pack can ignite, posing fire and burn hazards.	3,300	Gyroor has received 2 reports of battery packs igniting and 2 reports of injuries that required medical treatment, including burns to the consumer's foot and smoke inhalation.
December 12, 2022	AIEn USA Recalls Art of Green Laundry Detergent Products	The recalled products can contain bacteria, including Pseudomonas aeruginosa. People with weakened immune systems or external medical devices who are exposed to Pseudomonas aeruginosa face a risk of serious infection that may require medical treatment. The bacteria can enter the body if inhaled, through the eyes, or through a break in the skin.	14,550	None reported
December 08, 2022	Life is Good Company Recalls Darkest Blue Women's Fleece Sweatshirts and Men's Fleece Shorts	Fails to meet flammability standards for clothing textiles, posing a risk of burn injuries to consumers.	750	None reported
December 08, 2022	Ortal Recalls Gas Fireplaces	Improper installation of the fireplaces can lead to problems with heat release and/or ventilation, posing a fire hazard.	400	The firm has received 4 reports of incorrect fireplace installation, all resulting in fires, causing property damage. No injuries reported.

Date	Recall Heading	Hazard Description	Units	Incidents
December 08, 2022	3M Recalls Scotch Thermal Laminators	A safety feature can malfunction if the laminator overheats, posing a fire hazard.	516,500	3M has received 9 reports of the laminators catching on fire, including 3 reports of minor property damage. No injuries reported.
December 08, 2022	Cordless Window Shades Battery Packs; Manufactured by Ningbo Dooya Mechanic & Electronic Technology Co.	The battery packs can overheat, posing a fire hazard.	56,000	The firm has received 5 reports of the batteries overheating in homes, 1 report of a battery overheating in a factory, and 1 report of a fire in a warehouse. No injuries reported.
December 01, 2022	The Laundress Recalls Laundry Detergent and Household Cleaning Products	Recalled products can contain bacteria, including Burkholderia cepacia complex, Klebsiella aerogenes and multiple different species of Pseudomonas. People with weakened immune systems, external medical devices, and underlying lung conditions who are exposed to the bacteria face a risk of serious infection that may require medical treatment.	8,000,000	The company is aware of 11 consumers who have reported Pseudomonas infections and is investigating these reports to see if there is any connection to the recalled products.
December 01, 2022	Kubota Recalls Utility Vehicles	The utility vehicle's steering shaft can shear at or near the electric power steering housing, and cause the driver to lose steering control, posing injury and collision hazards.	19,500	Kubota has received 5 reports of incidents worldwide of steering shaft shearing. No injuries or deaths reported.
December 01, 2022	American Honda Recalls 2022 All-Terrain Vehicles (ATVs)	The vehicle's throttle cable can get stuck, posing crash and injury hazards.	2,900	The firm has received 1 report of the throttle cable getting stuck resulting in a crash and minor injuries.
December 01, 2022	HABA USA Recalls Discovery Cubes Animal Hide and Seek Activity Toys	The seam on the activity toy's house can open, allowing a young child access to the toy's filling, posing choking and ingestion hazards.	800	One consumer report noticed the open seam on the toy's house. No injuries reported.
December 01, 2022	Polaris Recalls RZR Recreational Off-Road Vehicles	A fuel leak can occur at the fuel pump assembly joint on the fuel tank in close proximity to a hot surface, posing a fire hazard.	600	The firm has received 5 reports of fuel leaks including 1 report of fire. No injuries reported.
December 01, 2022	Summit Treestands Recalls Viper Level PRO SD Climbing Treestands	The treestand's tree cable can dislodge from the cable assembly, posing a fall hazard to consumers.	2,555	The firm has received 2 reports of the treestand's cable dislodging. No injuries reported.
December 01, 2022	Target Recalls Cloud Island 4-Piece Plush Toy Sets	Tires on the toy vehicles can detach, posing a choking hazard to children.	23,400	The firm has received 4 reports of tires detaching from toy vehicles. No injuries reported.
December 01, 2022	JBR Solutions Recalls Aduro Surge Protectors	Surge protectors contain incorrect polarization and poorly soldered connections, posing shock and fire hazards.	51,750	JBR Solutions has received 1 report of incorrect polarization of the surge protector. No injuries or fires reported.
December 01, 2022	Conair Recalls Cuisinart Compact Blender & Juice Extractor Combos	The nut holding the blender blade assembly can loosen and detach from the base when in use, posing a laceration hazard if a consumer comes in contact with a loose blade.	66,000	The firm has received 3 reports of incidents in which the blender blade detached during use. In 1 of the incidents the blade perforated the blender container. No injuries reported.

April 14, 2022	MerchSource Recalls FAO Schwarz Branded Toy Wood Play Smart Robot Buddy(s) and Wood Sensory Boards	Due to a manufacturing issue, small parts from the products can come loose, posing a choking hazard to young children.	46,200	The firm has received 20 reports of small parts coming loose or falling off of the toys, including 9 reports of parts coming loose or falling off of the Toy Wood Play Smart Robot and 11 reports of parts coming loose or falling off of the Toy Wood Sensory Board. No injuries reported.
April 14, 2022	MTD Recalls Craftsman and Troy-Bilt Riding Lawn Mowers	The riding mowers can fail to come to a complete stop and continue to move at a speed of about one mile per hour when the clutch/brake pedal is fully depressed, posing a low speed crash hazard.	6,200	None reported
April 14, 2022	Diving Inflation Valves Recalled: Manufactured by SI TECH	The internal part in the valve can malfunction while in use, causing loss of inflation and thermal protection, posing a risk of hypothermia to the consumer.	1,670	SI Tech has received 3 reports of the valve part malfunctioning, resulting in loss of inflation in the dry suit. No injuries reported.
April 07, 2022	biOrigins Sodium Hydroxide Products Recalled: Sold Exclusively at Amazon.com	The packaging of the products is not child resistant, as required by the Poison Prevention Packaging Act, posing a risk of chemical burns and irritation to the skin and eyes.	30	None reported
April 07, 2022	Bestar Recalls Wall Beds	The wall beds can detach from the wall and fall onto those nearby, posing serious impact and crush hazards.	129,000	
April 07, 2022	Stokke Recalls Clikk High Chairs	The white plastic seat can break, posing fall and injury hazards to children.	790	Stokke has received 6 reports of the seat breaking, including two reports of minor bruises.
March 31, 2022	PlayMonster Recalls Kid O Hudson Glow Rattles	The rattle's legs can break off, posing a choking hazard to young children.	8,900	The firm has received 3 reports of the rattle legs breaking off. No injuries reported.
March 31, 2022	SOUNDBOKS Recalls Bluetooth Speakers with Lithium-Ion Batteries	The lithium-ion battery can overheat, posing a fire hazard.	6,700	None reported

Date	Recall Heading	Hazard Description	Units	Incidents
March 31, 2022	Universal Security Instruments Recalls Combination Photoelectric Smoke & Carbon Monoxide Alarms	The alarms can fail to alert consumers to the presence of a hazardous level of carbon monoxide, posing a risk of carbon monoxide poisoning or death. Carbon monoxide (CO) is an odorless, colorless, poisonous gas.	8,000	Universal Security Instruments has received 2 reports of units that failed to alarm for the presence of carbon monoxide within the specified time requirement. No injuries have been reported.
March 31, 2022	Maped Helix USA Recalls Metal Lockable Drug Chests	The locking mechanism can fail allowing access to the contents inside the chest, posing a risk of poisoning.	7,700	Maped Helix USA has received 2 reports of the locking mechanism failing. No injuries reported.
March 24, 2022	Boxine U.S. Recalls tonies Blocks: Sold Exclusively at tonies.com	When two or more high-powered magnets are swallowed, either intentionally by younger children or accidentally by older children, the ingested magnets can attract to each other, or to another metal object, and become lodged in the digestive system. This can result in perforations, twisting and/or blockage of the intestines, infection, blood poisoning and death.	4,200	tonies has received 1 report of the magnet detaching from the product. No injuries reported.
March 24, 2022	Commencal Recalls Ramones 14-Inch Kids Bicycles	Federal regulations require bicycles with seat heights that measure at or below 25 inches to be equipped with foot brakes. These bicycles are equipped only with hand brakes and can pose a crash hazard or a risk of injury to young children who might not be able to stop the bicycles using handbrakes only.	925	None reported
March 24, 2022	EGL Motor Recalls EGL and ACE-branded Youth All-Terrain Vehicles (ATVs)	The ATVs fail to comply with the requirements of the federal mandatory ATV safety standard aimed at reducing risk of serious injury or death. The B125 ATVs exceed the maximum speed limitations for vehicles intended for children aged 10 and older. For the Madix 110, the parking brakes do not prevent the movement of the vehicle. In addition, the handlebars on both ATVs pose a laceration hazard should the rider's body or head impact the handlebars at a high rate of speed such as in a crash.	500	None reported
March 24, 2022	Segway Recalls Ninebot Children's Bicycle Helmets	The bicycle helmets do not comply with the positional stability and retention system requirements of the U.S. CPSC federal safety standard for bicycle helmets. The helmets can fail to protect in the event of a crash, posing a risk of head injury.	960	None reported
March 24, 2022	Sakar International Recalls Dimensions Bluetooth Speaker Multi-Purpose Helmets; Sold Exclusively at Walmart	The recalled helmets do not comply with the U.S. CPSC federal safety standard for bicycle helmets, posing a risk of head injury in a fall.	89,000	None reported

Date	Recall Heading	Hazard Description	Units	Incidents
March 17, 2022	ToolGuards Portable Water Immersion Heaters Recalled; Imported by FXswede AB; Sold Exclusively at Amazon.com	The water immersion heater can overheat, melt or catch fire, posing shock, electrocution and fire hazards.	5,000	The firm has received 19 reports of the recalled water immersion heaters overheating, melting or catching fire and 2 reports of consumers being shocked.
March 17, 2022	HD Premier Recalls DigitDots Magnetic Balls	When two or more high-powered magnets are swallowed, either intentionally by younger children or accidentally by older children, the ingested magnets can attract to each other, or to another metal object, and become lodged in the digestive system. This can result in perforations, twisting and/or blockage of the intestines, infection, blood poisoning and death.	119,620	HD Premier is aware of 4 children who have ingested DigitDots and required surgery to remove the magnets. In addition, CPSC is aware of other reports of children and teenagers ingesting other companies' high-powered magnets and requiring surgery, including 2 deaths (from other products).
March 17, 2022	Acme United Corporation Recalls PhysiciansCare Brand Over-the-Counter Drugs	The packaging of the products is not child resistant, as required by the Poison Prevention Packaging Act, posing a risk of poisoning if the contents are swallowed by young children.	165,000	None reported
March 16, 2022	Specialized Bicycle Components Expands Recall of Sirrus Bicycles with Alloy Cranks	The crank arm can disengage and cause the bicycle's rider to lose control, posing fall and injury hazards.	19,000	Specialized Bicycle Components has received 30 reports involving the crank arm disengaging on model year 2021 or 2022 Sirrus X 3.0 and 4.0 bicycles. No injuries reported.
March 16, 2022	Prestone Recalls Shop Pro RV & Marine Antifreeze; Sold Exclusively at AutoZone	Bottles labeled as Shop Pro RV Marine Antifreeze were improperly filled with a product containing methanol. These improperly filled bottles do not have the mandatory cautionary label for products containing methanol warnings, including that the vapors are harmful and the product can be fatal or cause blindness if swallowed.	325	None reported
March 16, 2022	B.toys Walk 'n' Learn Wooden Activity Toddler Walkers Recalled; Distributed by Maison Battat	The wheels and wheel attachment hardware can detach from the walker in small pieces, posing a choking hazard to young children.	17,200	Battat has received 6 reports of the wheels and attachment hardware detaching, including 1 report of a child putting a detached metal nut in her mouth.
March 16, 2022	RH Recalls Illuminated Mirrors	There are loose components in the mirror's bulb sockets, which can lead to overcurrent and overheating, posing fire and shock hazards.	3,300	RH has received 3 reports of the mirror's electrical switch or wiring catching fire. RH has also received 60 reports of electrical issues including melting, smoking, sparking, shorting and bulbs bursting or breaking. No injuries or property damage reported.

Date	Recall Heading	Hazard Description	Units	Incidents
March 16, 2022	Reckitt Recalls More than 3 Million Bottles of Airborne Gummies	When opened for the first time, pressure build up in the bottle can cause the cap and underlying seal to pop off with force, posing an injury hazard.	3,740,000	Reckitt has received 70 reports of the cap or seal popping off the bottles, including 18 reports of minor injuries and 1 report of an eye injury requiring medical attention.
March 09, 2022	American Honda Recalls Recreational Off-Highway Vehicles (ROVs)	The vehicle's intake funnel band screw can loosen and enter the engine through the intake funnel and cause sudden engine failure. If this occurs, it could result in a loss of control, increasing the risk of a crash or injury.	32,000	Honda has received 16 reports of loose intake funnel band screws entering the engine, resulting in engine damage/failure. Honda has received 1 report of a loss of control, resulting in a crash with minor injuries to the occupants.
March 09, 2022	Crate and Barrel Recalls Be the Band Music Sets	The maracas can break or become unscrewed and release the metal beads inside, posing choking and suffocation hazards to young children.	620	Crate and Barrel has received six reports of broken or unscrewed maracas. No injuries reported.
March 09, 2022	Olight Ecommerce Technology Recalls Flashlights	The flashlights can be turned on inadvertently and overheat while stored in the holster or a consumer's pocket, posing a burn hazard to consumers.	215,100	The firm has received 127 reports of flashlights turning on inadvertently and overheating resulting in 22 reports of burn injuries. Three consumers reported receiving second-degree burns.
March 09, 2022	Danby Products Recalls Free-Standing and Slide-in Electric and Gas Ranges	The ranges can tip over when a heavy weight is placed on an open oven door and the anti-tip-over bracket is not secured to the wall or floor, posing a tip-over hazard and risk of burn injuries from hot food or liquids in cookware.	1,700	None reported
March 03, 2022	BRP Recalls Snowmobiles	Fuel can leak from the fuel tank vent onto hot components when the snowmobiles are on a tilt or flipped over, posing a fire hazard.	700	BRP has received 5 reports of fires related to fuel leaking. No injuries reported.
March 02, 2022	Petzl Recalls PIRANA Descender Canyoneering Devices	The user's rope can get caught or wedged in the PIRANA blocking slot and stop or suspend the climber, posing a drowning risk if they are under a waterfall or pool.	3,450	None reported
March 02, 2022	ALDI Recalls Bee Happy 12 Days of Craft Advent Calendars	Surface paint on the brown bell found in "Day 10" of the advent calendar contains levels of lead that exceed the federal lead paint ban, posing a risk of lead poisoning. Excessive levels of lead can be toxic or cause other health problems to young children if the paint is ingested.	13	None reported
March 02, 2022	Fitbit Recalls Ionic Smartwatches Due to Burn Hazard; 1 Million Sold in the U.S.	The lithium-ion battery in the Ionic smartwatch can overheat, posing a burn hazard.	1,000,000	Fitbit has received at least 115 reports in the United States (and 59 reports internationally) of the battery in the watch overheating with 78 reports of burn injuries in the United States including 2 reports of third-degree burns and 4 reports of second-degree burns (and 40 reports of burn injuries internationally).

Date	Recall Heading	Hazard Description	Units	Incidents
February 24, 2022	Kelly Wynne Recalls Children's Handbags	The metal zipper slider, zipper O-ring, d-ring, rivet and stud of the children's handbags contain levels of lead that exceed the federal lead content ban. Lead is toxic if ingested by young children and can cause adverse health issues.	1,050	None reported
February 23, 2022	Bebe au Lait Recalls Teethers	The string that connects the beads on the teethers can come untied, releasing the beads and posing a choking hazard to young children.	8,600	Bebe au Lait has received 6 reports of detached beads, including 1 report of a child placing a bead in their mouth.
February 23, 2022	TJX Recalls Menorahs; Sold at Marshalls, HomeGoods and Homesense Stores	The resin and medium-density fiberboard ("MDF") menorahs can burn or catch fire when holding lit candles, posing a fire hazard.	7,900	TJX has received 3 reports in the U.S. of the menorahs burning or catching on fire when holding lit candles. No injuries or property damage reported.
February 17, 2022	Lovevery Recalls Drinking Cup With Handle in The Inspector Play Kits	The handle can detach from the steel cup, posing a choking hazard to young children.	169,000	Lovevery has received 70 reports of the handle of the drinking cup becoming partially or completely detached including 2 incidents where a child had the cup handle in their mouth. No choking injuries reported.
February 17, 2022	BrushX Hot Air Brushes Recalled; Imported by Ecom Brands	The recalled hot air brushes do not have an immersion protection device, posing an electrocution or shock hazard to the user if it falls into water when plugged in.	100,000	None reported
February 17, 2022	Zeno Recalls Infant Walkers	The infant walkers fail to meet the federal safety standard. They can fit through a standard doorway and are not designed to stop at the edge of a step as required by the federal safety standard. The walkers also have leg openings that allow the child to slip down until the child's head can become entrapped at the neck. Babies using these walkers can be seriously injured or killed.	1,355	None reported
February 17, 2022	Polaris Industries Recalls Snowmobiles	The throttle release switch (TRS) can fail to disengage when the throttle lever is released and if a stuck throttle condition occurs when the TRS fails to disengage, it can lead to loss of vehicle control, posing a crash hazard. Additionally, on certain Model Year 2022 MATRYX RMK snowmobiles, the throttle cable can be kinked during installation, which can lead to damage of the throttle cable during operation and impairment of the throttle function, posing a crash hazard.	7,400	Polaris has received 4 reports of kinked throttle cables and 3 reports of a stuck throttle. No injuries reported.
February 17, 2022	H&M Recalls Children's Sleepwear Sets	The children's sleepwear sets fail to meet the federal flammability standards for children's sleepwear, posing a risk of burn injuries to children.	615	None reported
February 17, 2022	Husqvarna Recalls All-Wheel Drive Robotic Lawnmowers	The lithium-ion battery in the lawnmower can overheat, posing a risk of fire.	1,400	The firm has received 5 reports of batteries overheating, including 2 reports of fires. No injuries reported.

Date	Recall Heading	Hazard Description	Units	Incidents
February 17, 2022	Yamaha Recalls Golf Cars and Personal Transportation Vehicles	The recalled vehicles can have brake failure, posing a crash hazard that could result in injury or death to the user or bystander.	5,000	None reported
February 16, 2022	Anecdote Candles Recalls Double-Wick Autumn Candles; Sold Exclusively at Anthropologie	The double wick candles can achieve higher than usual flames, causing the glass container to break apart, posing fire and laceration hazards.	19,380	Anthropologie has received 9 reports of the candles flaming up, cracking or breaking apart while in use, resulting in minor property damage. No injuries reported.
February 16, 2022	In-Things Recalls Scarves; Sold Exclusively at Saksoff5th.com	The recalled scarves fail to meet flammability standards for clothing textiles, posing a risk of burn injuries to consumers.	200	None reported
February 16, 2022	Valco Baby Recalls Snap Duo Trend Strollers	The stroller's front wheels can break off while in use, causing the strollers to fall unexpectedly, posing a fall hazard to children in the stroller.	1,290	Valco Baby has received 207 reports of front wheels cracking or breaking. No injuries reported.
February 16, 2022	Viking Range Recalls Freestanding Gas Ranges	The rigid gas tubing can separate at the joint to the bake, broil and griddle burners, posing a risk of a gas leak and fire hazard when these burners are in operation.	3,050	None reported
February 16, 2022	American Landmaster Recalls Utility Vehicles	The steering shaft can separate from the joint and result in a loss of control, posing crash and injury hazards.	1,050	American Landmaster has received 7 reports of the steering shaft separating. No injuries reported.
