

## Your Fall Report

# What's being done to save the bees?

By Steve Blackledge, senior director of our national conservation program

One in 7 Americans now lives in a state that restricts the use of bee-killing pesticides. How did that happen?

Here's a quick look at the progress to date:

### States banning bee-killing pesticides

Neonicotinoids (or neonics for short) are a class of pesticides that have been linked to bee die-offs. They're 1,000 times more toxic to bees than DDT, and even sublethal doses cause a lot of damage. These neurotoxic pesticides attack bees' brains, making it harder for them to sleep, forage, fly and even find their way home.

Fortunately, states are recognizing the threat these dangerous pesticides pose to bees, and they're taking action to limit their use and sale. These are the nine states that have already passed laws to that effect: Connecticut and Maryland in 2016; Vermont in 2019; Maine and Massachusetts in 2021; New Jersey, New York and Rhode Island in 2022; and Colorado in 2023.

Thanks to this progress, 1 in 7 Americans now lives in a state with some restriction on bee-killing pesticides.

Next up: Our sister group Environment California is working to build support for a bill currently under consideration in California that would address non-agricultural uses of neonics, such as on lawns, gardens and golf courses. If successful, it would boost that number to 1 in 4 Americans living in a state with a similar such law. And our national network is looking for more opportunities to advance legislation in more states.

Environment Colorado staff were present as Gov. Jared Polis signed a law in May that made Colorado the ninth U.S. state to limit the sale of dangerous bee-killing pesticides.

### Taking neonics off store shelves

When it comes to maintaining our lawns and gardens, there are plenty of safe products on the market. Too many garden centers, however, still sell pesticides that are harmful to bees.

Conservationists have already helped convince The Home Depot and Lowe's to commit to phasing out the sale of bee-killing neonics for consumer use. Now, we're calling on Amazon, the world's largest online retailer, to do the same.

Thanks  
for making it  
all possible

## Is your favorite beach safe for swimming?

Even though our water is cleaner than it used to be, runoff pollution and sewage overflows still can make swimmers sick. Scientists estimate 57 million instances of people getting sick each year from swimming in polluted waters in the U.S. Those illnesses can include nausea, diarrhea, ear infections and rashes.

Our research partners at Environment America Research & Policy Center released

In May, the Department of the Interior announced new funding for wildlife crossings and connectivity to help protect these key migration paths. Deputy Secretary Tommy Beaudreau committed nearly \$4 million in grants along with \$9.2 million in matching contributions for 13 projects in nine states that will help secure migration paths, ensure safer highway crossings for the wildlife, and reconnect habitats. The grants are made possible through the Improving Habitat Quality in Western Big Game Migration Corridors and Habitat Connectivity program established by a past secretarial order.

Our national network helped win the inclusion of funding for wildlife crossings in the Bipartisan Infrastructure Law passed in 2021, and our state environmental groups have since helped win support for wildlife crossings in Colorado, Oregon and Pennsylvania.

## Rooftop solar on America's warehouses could power millions of households

Covering the roofs of America's warehouses and distribution centers with solar panels could generate enough clean electricity to power every household in every state's largest city, according to "Solar on Warehouses," a new report from Environment Colorado Research & Policy Center and Frontier Group.

"If we want to create a clean energy future, we should look first to the already-built environment that could host the tools we need," said Susan Rakov, chair of Environment Colorado Research & Policy Center's clean energy program and managing director of Frontier Group. "Warehouse rooftops provide a perfect opportunity—they're big, they're flat and they're begging to be put to this crucial use."

Cumulatively, America's warehouses have almost 16.4 billion square feet of rooftop space—about twice the area of Memphis, Tennessee, one of the 30 largest U.S. cities. Putting solar on all these warehouse roofs could generate 185.6 terawatt-hours (TWh) of solar electricity each year, enough to power almost 19.4 million households and reduce global warming pollution equivalent to more than 112 million metric tons of carbon dioxide annually.

NBC News Center Maine

John Rumpler, our national clean water director and senior attorney, spoke with local media about the threat sewage pollution poses to people enjoying popular summer destinations like Gooch's Beach in Kennebunk, Maine.

a new report, "Safe for Swimming?," which revealed that more than half of coastal and Great Lakes beaches surveyed had bacterial levels indicating potentially unsafe levels of fecal contamination on at least one day last year. As part of the report, we created a state-by-state map that allows the public to see which beaches were potentially unsafe for swimming on the greatest number of days last year.

"All of us want to enjoy a safe and healthy day at the beach," said John Rumpler, our national clean water director and senior attorney. "By calling attention to the dangers of water pollution, we can make a strong case for our elected representatives to invest in water infrastructure and stop sewage overflows."

To see if your favorite beach is safe for swimming, visit [environmentamericacenter.org](http://environmentamericacenter.org).

## New grants will help reconnect wildlife habitats

Mule deer, pronghorn and elk migrate up to 150 miles in the spring and summer and again to shelter from storms in the winter. These seasonal migrations are critical to the species, but the wildlife following these historic routes also must navigate a treacherous gauntlet of highways and roads.

## What's being done to save the bees?

Members and supporters like you have helped deliver tens of thousands of messages to Amazon, urging it to take bee-killing pesticides off its virtual shelves.

### Winning federal progress for the bees

Major progress is also being made at the national level:

- In 2021, we celebrated when we won protection for bees on 11 million acres of Department of Defense-owned land.
- The Inflation Reduction Act, passed in early 2023 and advocated for by our national network, included nearly \$20 billion in additional funding for the U.S. Department of Agriculture's (USDA) conservation programs. We're urging the USDA to use this funding to help pollinators, such as through its program to reimburse farmers for replanting prairie that provides native bees with much-needed habitat.

Now, our network is laying the groundwork for even bigger wins, as we urge the Biden administration to reinstate a ban on the use of bee-killing pesticides in wildlife refuges (the places bees should be safest) and call on the Environmental Protection Agency to restrict three of the most common types of neonics as they undergo a periodic review.

Of course, there's still a long way to go to save the bees. They face a triple threat of pesticide use, habitat loss and climate change. And the policies that have been passed so far have mainly addressed the consumer use of bee-killing pesticides, while still allowing for agricultural use.

Still, no one thought it was possible to ban DDT or any other pesticide until Rachel Carson wrote "Silent Spring" and sparked an environmental movement. Together, we can keep that movement burning bright as we work to win a ban on bee-killing neonics.

Farmers market-goers show their support for saving the bees.

## Your 2023 Fall Report

### Our mission:

We all want clean air, clean water and open spaces. But it takes independent research and tough-minded advocacy to win concrete results for our environment, especially when powerful interests stand in the way of environmental progress.

That's the idea behind Environment Colorado, Inc., a project of Environment America, Inc. We focus on protecting Colorado's air, water and open spaces. We speak out and take action at the local, state and national levels to improve the quality of our environment and our lives.

## 500,000 people call for mature and old-growth forest protections

More than 500,000 people have called on the U.S. Forest Service to protect mature and old-growth trees and forests from logging on federal land as a cornerstone of U.S. climate policy.

In April, the Forest Service issued a rulemaking proposal to improve the climate resilience of federally managed forests. The public comment period on the proposal closed in July.

In addition to the hundreds of thousands of people who weighed in, dozens of environmental and grassroots organizations submitted comments, including Environment Colorado Research & Policy Center.

Activists and environmental advocates gathered at the Washington, D.C., offices of the Forest Service to celebrate the outpouring of public support.

"I'm not surprised that so many people took the time to get involved in this comment period. We love our trees and forests, so of course people spoke up," said Ellen Montgomery, public lands campaign director for Environment America Research & Policy Center. "Our forests clean our water, are home for wildlife, and are an incredible ally in our work to stop climate change. Our mature and old-growth forests and trees are worth more standing than as lumber."

*Public Lands Campaign Director Ellen Montgomery and activists delivered public comments from 500,000 people to the Forest Service headquarters in D.C.*
